CROPSAVER

HAY PRESERVATIVE AND APPLICATOR SYSTEMS FOR BALED HAY.

Applicators • Moisture Sensors • Automatic Controls
Control Options • CropID™ System • Precision Accessories
SAFE, INNOVATIVE BALING AT HIGH MOISTURES.

Maximize the number of acres baled per day with a chemically-buffered form of propionic acid formulated to prevent spoilage of valuable hay crops. New Holland CropSaver® is gentle on your baler with a pH of 6.0 that is as neutral as rainwater, yet it is just as effective as straight propionic acid. And, it works on all types of hay, including alfalfa, grass and other crops susceptible to decay at higher moistures.

NEW HOLLAND CROPSAVER IS AVAILABLE IN FOUR SIZES FOR ANY SIZE BALING OPERATION.

**CROPSAVER HAY PRESERVATIVE INGREDIENTS**

</tbody>
</table>

Not recommended on any hay above 30% moisture.

**BETTER BALE QUALITY.**

Hay baled at higher moistures can heat and spoil. New Holland CropSaver crop preservative will treat hay up to 30% moisture.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Over 27%</td>
<td>Can result in temperatures over 140°F; hay can turn black and combust</td>
</tr>
</tbody>
</table>

**CALCULATE THE CROPSAVER BENEFITS:**

- Greener hay with higher feed value.
- No more waiting on the weather. Bale when you’re ready at moistures up to 30%.
- Works well on all types of hay.
- Non-corrosive formula won’t harm baling equipment, operators or livestock.
- Store treated hay for years. It will look and feed as fresh as when it was first baled.
- Easy-to-store 15-gallon drum works well for smaller operations.

**SAFE, COST-EFFECTIVE AND SMART.**

Bales treated with CropSaver yield more tonnage, have a higher relative feed value and are safe for all livestock. Propionic acid, the main ingredient in CropSaver, is an organic acid occurring naturally in a horse’s gastrointestinal tract. In ruminants, propionic acid is produced by rumen bacteria, so it is beneficial in the digestive process.

**PRACTICAL APPLICATION.**

Gentle and effective, the ingredients in CropSaver will not cause corrosion on your baling equipment. When paired with approved New Holland applicators at the recommended application rate, you can be assured of maximizing your hay baling productivity year after year with CropSaver.

**CROPSAVER HAS BEEN ON THE MARKET OVER 15 YEARS AND IS A CLEAR FAVORITE WHEN IT COMES TO PRESERVING BALES.**

partstore.agriculture.newholland.com
AppliCators / MoeiitS SensorS

Better Bales With the Right Application Equipment.

Greener hay with high feed value is the ultimate goal of every smart producer. All it takes is the right application system. New Holland automatic applicator moisture sensors accurately “read” moisture percentages in real time, adjusting every three seconds to match hay conditions. Large or small, our application process means your crops are baled at the highest quality possible, with minimal product waste.

Large Square BalerS.

CropSaver is formulated with the large hay producer in mind. Bales produced between 16% and 27% moisture will not heat and will maintain their high quality, smell and appearance when treated with CropSaver.

Round BalerS.

Hay can be baled with CropSaver at moistures up to 30% with a round baler, extending the hours of operation. Although no preservative product can reduce outside weathering, CropSaver can preserve the quality on the inside.

Small Square BalerS.

CropSaver enables hay to be baled at moistures up to 30% with small square balers. Get out in the fields early, even on cloudy days, and work later in the evenings when dew is heavier.

No matter what baler you use, there is a model of New Holland CropSaver applicator for your implement.

Efficient Design With You in Mind.

Tanks and saddles have been engineered to mount on all New Holland and any other brand of baler so they are easy to reach and fill, yet out of the way.

Moisture Doesn’t Stand a Chance.

Sensors in the applicators accurately sense moisture levels on round, large or small square balers. A positive sensor is mounted on one side with an isolated ground mount on the other side. When the bale makes contact, a current passes through it, measuring moisture from one side to the other. This results in a moisture reading that is accurate to within one point.

large Square Bulers.

Automatic systems for large square balers are equipped with star wheels that mount on the top of the bale chute.

Round Balers.

Automatic systems for round balers are equipped with two sensing discs, one mounted on each of the baler’s sidewalls.

Small Square Balers.

Sensors for the automatic system on small square balers consist of two star wheels that mount on the bottom of the bale chute.

Pumping System & Spray Shields.

Automatic systems are equipped with three pumps and a built-in flowmeter. As the hay moisture fluctuates, the system turns on the pumps needed to apply the right amount of preservative on the go.

The electronic applicator consists of a single pump and gauge. The pumping rate is increased or decreased by manually adjusting the control box in the cab.

Consistent preservative coverage throughout the crop is critical. Each baler model has a spray shield designed to fit specifically in the pick-up area, to assure complete and accurate coverage.

partstore.agriculture.newholland.com
AN AUTOMATIC SYSTEM CREATES EXCEPTIONAL BALES.

The automatic applicators work as you go, applying the right amount of preservative at the right time, based on moisture levels. You can bale faster and complete more tonnage while tracking the volume of preservative used. Application units attach to New Holland large square balers, conventional balers, smaller round balers or any manufacturer’s baler.

AUTOMATIC CONTROLS FOR LARGE SQUARE BAVERS.

600 SERIES.

The new 600 Series Automatic Applicator System for large square balers makes bailing quality hay easier and more efficient. Features include:

- ISOBUS compatible
- Control and application information displayed through monitor in cab (no need for second display)
- Records bale information and job records
- Provides capacity to add on additional features such as CropID™ tagger, dye sprayer, bale weight information and GPS
- Includes option to control applicator through touch screen display

If a baler or tractor is not equipped with an ISOBUS monitor, the Harvest Tec touch screen display can be mounted in the cab. Either monitor (an ISOBUS monitor or the Harvest Tec touch screen display) gives the operator complete control and provides information for all the balers equipped with the automatic applicator. Both monitors display:

- Moisture content
- Speed of baling (tonnage) on large square and small square balers
- Volume of preservative used per bale
- Target application rate and actual application rate
- Total tons baled

The 600 series can be controlled by two displays:

A. IntelliView™ IV Monitor
B. Harvest Tec Display

AUTOMATIC CONTROLS FOR ROUND AND SMALL SQUARE BAVERS.

500 SERIES.

The 500 Series Automatic Applicator System for round and small square balers makes bailing hay and keeping track of bales virtually effortless. The system continuously monitors moisture readings and automatically adjusts application rates. It also features a USB port on the side of the processor, which allows job records to be downloaded onto a personal computer, and new software updates to be uploaded to update the system. The system on small square balers has a built-in stroke counter to help the operator create a more consistent bale by monitoring the number of flakes per bale.

400 SERIES.

The standard automatic control system for round and small square balers is still available and remains a popular choice. Driven by the baler mounted processor and touch-screen display, the automatic system is able to store up to 60 job records by field name with total tons bailed, average and high moisture, date and time, and amount of preservative used.

400 & 500 series monitors display:

- Moisture content
- Speed of baling (tonnage)
- Volume of preservative used per bale
- Target application rate and actual application rate
- Total tons baled
INNOVATION THAT WORKS FOR LARGE BALERS.

Automatic applicators take the guesswork out of baling hay. They also make it easy and convenient. You have complete control from the tractor with the baler’s IntelliView monitor or the Harvest Tec touch panel monitor. Leading-edge technology that works for you.

AUTOMATIC MODE.

From the main operating screen, moisture readings are averaged every three seconds; baling rate every five seconds. The controller can match application rate for precise application.

MANUAL MODE.

Operator can override automatic features and proceed as needed.

SETUP.

Adjust moisture points or set rate per ton. Weights for balers not equipped with scale can be estimated.

DIAGNOSTICS.

Check pump outputs and voltage inputs as you go.

JOBS RECORDS.

Knowledge is power. Detailed job records, as shown below, help you stay efficient.

- Average and high moisture levels
- Bale weight
- Amount of product used
- Date/time

EVERYDAY ELECTRONIC CAB CONTROL.

For small-scale operations, an electronic control applicator is available on all baler models and sizes. The dial on the control box can be adjusted for correct preservative output. Electronic components in the cab control box hold the application rate constant.

This unit is included for:

- 25 and 55-gallon applicators with electronic control
- 110 and 115-gallon applicators with electronic control for large square balers (manual control available for round and small square balers).

YOU RUN THE SHOW FOR ROUND OR CONVENTIONAL BALERS.

Automatic applicators provide “in-the-field” office management for your baling operations.

400 AND 500 MONITORS.

- Control the automatic application of preservative.
- Allow moisture to be read continuously by sensors, fed to the processor and displayed.
- Measure speed of baling, the amount of preservative used and the average moisture of the last bale.
- Display moisture as it changes, 200 feet at a time
- Automatically adjust the rate of preservative application every three seconds when in automatic mode. Actual rate of application is read by a flow meter and displayed on the screen as “actual” and compared to the set “target” rate.

400 & 500 monitors display:

A. Graph of the last 200 feet of window moisture
B. Current moisture
C. Moisture of last bale
D. Actual and target rate
E. Preservative used so far
C. SENSORS FOR SQUARE BALERS.
Sensors for the automatic system on square balers consist of two star wheels that mount on the top of the bale chute directly behind the knotters.

B. PUMP CONTROLLER.
The Pump Controller is housed in the pump manifold and is controlled by the main, Dual Channel Processor (DCP). Based on readings collected by the moisture sensors, the pump controller turns pumps 1, 2 and 3 on or off, applying the correct amount of preservative for the moisture and tonnage being baled.

E. MAIN PROCESSOR.
The main processor, or Dual Channel Processor (DCP), is the system’s main processing unit that controls the other modules and manages the entire system. Job records are downloaded via a USB port through the DCP.

D. OPTIONAL ROLLER CHUTE SCALE.
Provides on-the-go weighing and recording of each bale, accurate within +/- 2% even on hillsides.

A. OPTIONAL TAGGER.
The CropID™ Tagger is an optional addition to the automatic applicator on large square balers that allows you to take the specific information for each bale and transfer it to a tag that is attached to the twine. U.S. Patent 7,621,111B2 U.S. Patent 7,415,924B2

F. SPRAY SHIELD AND NOZZLES.
Spray shields and nozzles have been designed and placed to ensure maximum and even coverage of the crop.

G. AUTOMATIC CONTROL.
The touch-panel display is located in the tractor and displays:
- Moisture content
- Speed of baling
- Target application rate and actual application rate
- Volume used
- Last bale average moisture
- Total tons baled

FILE
partstore.agriculture.newholland.com
PRECISE, CUSTOMIZED BALE IDENTIFICATION.

The New Holland CropID™ Bale Identification System provides you with the very latest in precision hay production. Versatile and smart, this system allows you to customize your baling operation from start to finish, helping you get the most out of your uptime.

QUICK IDENTIFICATION.

Tagging bales with the CropID system provides sellers and buyers with a visible record of moisture, weight and production location.

INVENTORY.

Tagged bales make taking inventory easy. Scan bales during stacking, shipping or feeding to maintain accurate count.

EASY IDENTIFICATION.

CropID allows for reading individual bale data. When a bale with excess moisture is scanned into the field, it can be set aside to avoid damaging other bales in a stack.

SORTING BALES.

Create stacks according to bale quality, moisture levels or bale weights by scanning tags when sorting.

DESKTOP SOFTWARE.

Install the CropID system on a PC. Tagged and scanned bale information can be saved in the management program, creating searchable, detailed inventory records and printable shipping invoices.

FEEDING.

Tagging bales helps you provide quality feed at consistent moisture levels for optimal milk production.

INTELLIGENT COMPONENTS OF THE CropID SYSTEM.

A. BALER ANTENNA.

Mounted on the back of the bale chamber, the antenna writes all information gathered by the DCP to the tag.

B. TAGGER.

The tagger mounts on top of the bale chute. When signaled, it lifts the twine and the tag is wrapped to the twine as it is released. (U.S. Patent 7,621,111B2) (U.S. Patent 7,415,924B2)

C. STAR WHEELS.

Two star wheels are mounted on top of the bale chute behind the knotters. As the wheels turn with the bale, they will record the baling rate and measure moisture between 8% and 70%.

D. MAIN PROCESSOR (DCP).

The key component that drives the CropID system is the main processor (DCP). The star wheel sensors, GPS, and scale (if equipped) send the information to the DCP, which collects the bale information and creates a unique profile for every bale made. That information is then transferred to the tag.

DISPLAY.

Information collected by the DCP is displayed on the touchscreen display. The operator will always see the current moisture, rate of baling and when the tag is applied.

TAGS.

A permanent vinyl tag is wrapped around the twine, and each tag holds a radio frequency identification (RFID) chip with memory. As the tag passes under the bale antenna, a signal reaches the tag, saving the bale’s specific information permanently to the tag.

READING THE CropID TAGS.

The information on the CropID tag is read with a scanning device. The tag transmits information to a receiver on the scanner display. Using RFID frequency, the tag can be read without seeing it.

HAND SCANNING.

The tags can be read with a hand-held scanner up to 10 feet away.

SCANNING WHILE RETREIVING BALES.

When scanner is mounted on hay retriever, bales can be read up to 20 feet away. Bales can be rejected based on moisture level and other criteria. Information about bales (tonnage, number of bales in each grouping) is recorded during stacking.

SCANNING WITH A HAY LOADER.

When the hay is handled with a loader, the scanner can be mounted on the machine to provide information for sorting and controlling groups of bales. When a stack is made or a truck is loaded, the list of bales is recorded as a group, and can be downloaded, recorded or printed.

PORTAL SCANNER.

The portal system mounts to a boom over a truck and scans bales up to three deep as the load drives under it. Tag information records to a PC and create a list of shipped and received bales. System antennas can be wired directly to the PC or the data can be sent via wireless signal to a remote location.

PORTAL SCANNER.

The portal system mounts to a boom over a truck and scans bales up to three deep as the load drives under it. Tag information records to a PC and create a list of shipped and received bales. System antennas can be wired directly to the PC or the data can be sent via wireless signal to a remote location.

partstore.agriculture.newholland.com
MAKE BETTER HAY WITH PRECISION PRODUCTS.

From high-quality products like New Holland CropSaver™ hay preservative to worry-free automatic applicators with moisture sensors, to GPS and Field Mapping, Bale Scales, proficient pumping systems and smart shields, Harvest Tec and New Holland help you work smarter to get the job done.

DYE SPRAYER KIT.
The New Holland Model 840 Dye Sprayer Kit (New Holland part number HT0840DS). A simple and effective way to mark wet areas on large square bales. Compatible with any 500 Series Automatic Applicator on small and large square balers, and the 500 Moisture Monitor on large square balers, the three-gallon system is mounted near the bale chamber with the spray tips on the side or top of the bale chamber. Easy to fill and service, one tank of dye mix (part number HT0800DS) can last through a full tank of CropSaver hay preservative and is adjustable from 8% to 76% moisture on large square balers. While working, if the high moisture alarm sounds on the display, the system sprays a food-grade, red-colored dye that visibly marks the exact location of the wet spots within the bale, allowing for a quick and easy reference to better manage bales for feeding, sorting, inventory or storage.

GPS AND YIELD MAPPING.
An additional GPS package for your large square baler is available to take your productivity to the highest level. By incorporating the NH 162 GPS receiver from New Holland into the 600 Series Automatic Applicator and CropID Tagger, the system will write the coordinates of the exact location the bale was tied off in the field to the tag. Using this technology, the producer now has the ability to create yield maps for their crops, which will allow them to gain the knowledge needed to maximize productivity and plan for future yields.

BALE WEIGHING / SCALE INTERFACE.
If your 330 or 340 large square baler has a scale kit from New Holland, the new 600 Series Automatic Applicator System will automatically interface with the scale controls on the baler and adjust the preservative output for a more accurate application based on the weight. It will also add actual bale weight to the job records and to the CropID tag.

MODEL 474A: HAY INDICATOR KIT.
New Holland part number HT474ADS: A great addition to your CropSaver Automatic Crop Preservative System. The kit consists of two eyes that mount on the baler’s pickup head. The eye kit senses when crop is passing through and automatically starts and stops preservative application.

MODEL FX2000: DELMHORST MOISTURE TESTER.
New Holland part number HTFX2000DS: Hand-probe and pad-style moisture tester that digitally measures moisture levels in the bale, window and chamber.

MODEL 9212 (12-VOLT) & MODEL 9215 (110-VOLT) ELECTRIC TRANSFER PUMPS.
New Holland part number HT9212DS (12-Volt), New Holland part number HT9215DS (110-Volt): These standard output models will transfer preservative at a rate of four gallons per minute.

MODEL 9213: HAND TRANSFER PUMP.
New Holland part number HT9213DS: Inexpensive, this hand transfer pump is ideal for transferring small amounts of preservative easily.

MODEL 9214: 12-VOLT HIGH OUTPUT ELECTRIC TRANSFER PUMP.
New Holland part number HT9214DS: For a rapid transfer rate of 14 gallons per minute, this pump will get the job done quickly.

DYE SPRAYER KIT. The New Holland Model 840 Dye Sprayer Kit (New Holland part number HT0840DS). A simple and effective way to mark wet areas on large square bales. Compatible with any 500 Series Automatic Applicator on small and large square balers, and the 500 Moisture Monitor on large square balers, the three-gallon system is mounted near the bale chamber with the spray tips on the side or top of the bale chamber. Easy to fill and service, one tank of dye mix (part number HT0800DS) can last through a full tank of CropSaver hay preservative and is adjustable from 8% to 76% moisture on large square balers.

While working, if the high moisture alarm sounds on the display, the system sprays a food-grade, red-colored dye that visibly marks the exact location of the wet spots within the bale, allowing for a quick and easy reference to better manage bales for feeding, sorting, inventory or storage.

GPS AND YIELD MAPPING.
An additional GPS package for your large square baler is available to take your productivity to the highest level. By incorporating the NH 162 GPS receiver from New Holland into the 600 Series Automatic Applicator and CropID Tagger, the system will write the coordinates of the exact location the bale was tied off in the field to the tag. Using this technology, the producer now has the ability to create yield maps for their crops, which will allow them to gain the knowledge needed to maximize productivity and plan for future yields.

BALE WEIGHING / SCALE INTERFACE.
If your 330 or 340 large square baler has a scale kit from New Holland, the new 600 Series Automatic Applicator System will automatically interface with the scale controls on the baler and adjust the preservative output for a more accurate application based on the weight. It will also add actual bale weight to the job records and to the CropID tag.

MODEL 474A: HAY INDICATOR KIT.
New Holland part number HT474ADS: A great addition to your CropSaver Automatic Crop Preservative System. The kit consists of two eyes that mount on the baler’s pickup head. The eye kit senses when crop is passing through and automatically starts and stops preservative application.

MODEL FX2000: DELMHORST MOISTURE TESTER.
New Holland part number HTFX2000DS: Hand-probe and pad-style moisture tester that digitally measures moisture levels in the bale, window and chamber.

MODEL 9212 (12-VOLT) & MODEL 9215 (110-VOLT) ELECTRIC TRANSFER PUMPS.
New Holland part number HT9212DS (12-Volt), New Holland part number HT9215DS (110-Volt): These standard output models will transfer preservative at a rate of four gallons per minute.

MODEL 9213: HAND TRANSFER PUMP.
New Holland part number HT9213DS: Inexpensive, this hand transfer pump is ideal for transferring small amounts of preservative easily.

MODEL 9214: 12-VOLT HIGH OUTPUT ELECTRIC TRANSFER PUMP.
New Holland part number HT9214DS: For a rapid transfer rate of 14 gallons per minute, this pump will get the job done quickly.
