

2018 Product Improvement Bulletin

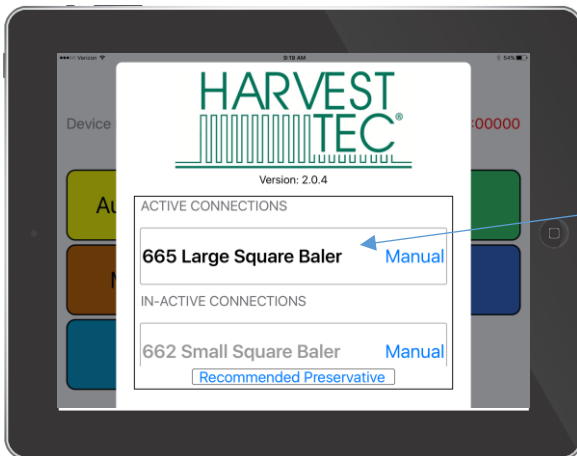

Bluetooth Receiver Update

for Large Square Balers

Customers that order an Automatic Applicator for their large square baler will now receive a Bluetooth receiver with the new indicator lights to show power and active connections, enabling easier visibility and serviceability on their kit when using an iPad as the display or in conjunction with the VT display.

Indicator lights on the Bluetooth receiver:
Red light indicates system has power

When the proper active connection is selected in the Hay App menu, the **Green** light will indicate connection with the iPad

The updated Bluetooth receiver will come standard in all NEW Automatic Applicator kits for all balers, and older receivers can be updated as needed.

Contact Harvest Tec for more info.
