Introduction

Read this manual carefully to ensure correct steps are done to operate the applicator. This applicator is designed to apply Harvest Tec buffered propionic acid. Use of alternative products may cause complications. Including inaccurate readings from the flow meter and damage to all parts. Resulting in the warranty being void. The applicator can be installed on many square balers with the proper installation kit. Before installing the unit on the baler, make sure you have the proper installation kit (See the chart below). If you are unsure about your installation kit contact your local authorized dealer for specifications. There is a parts break down in the back of this manual for the applicator.

Right and Left sides are determined by facing in the direction of forward travel.

Model Kit Reference

Baler Make	Baler Model	Model Number	Installation Kit	Tank Size

Safety

Carefully read all the safety signs in this manual and on the applicator before use. Keep signs clean and in good working order. Replace missing or damaged safety signs. Replacement signs are available from your local authorized dealer. See your installation manual or under the replacement parts section for the correct part numbers.

Keep your applicator in proper working condition. Unauthorized modifications to the applicator may impair the function and/or safety of the machine. Carefully read and understand all of the baler safety signs before installing or servicing the baler. Always use the supplied safety equipment on the baler to service the applicator.

Safety Signs Definitions

Number 4 Read and understand the operator's manual before using or working around the equipment. Part no. DCL-8000

Number 5 Open (unlocked) and closed (locked) position of the ball valve. Part no. DCL-8004

Preparing the Applicator for Operation

After the Applicator has been installed on the baler, follow the below steps to prepare for operating the applicator both safely and correctly.

Filling the tank through the Drain / Fill kit (Model 344, 350 & 351)

Read the label of the product being filled into the tank to determine what individual protective measures need to be taken. Locate the drain/fill line on the baler. Open the cam-couplers (A) and remove the protective plug (B). Insert the male coupler (found on transfer pump) into the female cam and close the cams (A).

To open the ball valve (C) turn the handle so it is vertical. After the ball valve has been turned on switch the pump to the On position. Monitor the level on the tank visually and shut off the pump before over filling. Once the pump is turned off, close the ball valve and remove the male coupler.

The handle of the ball valve (C) will be horizontal when closed. Reinstall the protective plug and close the cams. The Harvest Tec model 9212 transfer pump is recommended for this process.

Water is recommended for first time and annual start up procedures.

Drain/Fill line on the baler

Enlarged view of the drain/fill line valve and cam-coupler assembly.

Filling the tank through the tank lid opening (Model 344, 345, 350, 351)

Read the label of the product being filled into the tank to determine what individual protective measures need to be taken. Clean the tank lid area and unscrew the lid. Transfer product from the container into the tank.

Water is recommended for first time and annual start up procedures.

Operation of the Main Ball Valve

The ball valve should be closed at all times when the applicator is not being used. The valve should also be closed when any service work is being done to the baler or applicator.

The valve is located next to the pump and by the applicator tank. The arrow below points at the valve.

Connecting the power harness

The power harness that supplies power from the tractor battery to the applicator pump has a disconnect at the hitch. Connect the two together for operation. Always disconnect before servicing the applicator or baler.

WARNING: Stop tractor engine and shift to park, set brakes and remove key before leaving the tractor.

Bluetooth Operation

Turn On / Off iPad using the Sleep/Wake button

*(Info from Apple User's Guide)

Turn iPad on. Hold down the Sleep/Wake button until Apple logo appears. iPad will take a moment to load.

You can lock iPad and put it to sleep when you're not using it. Locking iPad puts the display to sleep, saves the battery, and prevents anything from happening if you touch the screen.

Sleep/Wake Button

When you are not going to use the iPad for an extended period of time put the unit into sleep mode by pressing the Sleep/Wake button. Press Sleep/Wake button to wake iPad and then unlock iPad by entering passcode.

Turn iPad off. Hold down the Sleep/Wake button for a few seconds until the slider appears onscreen, then drag the slider to the right.

Downloading Harvest Tec App

Bluetooth

- 1. If iPad does not have Wi-Fi turned on, select the Settings tab then select the Wi-Fi tab (below). Settings Wi-Fi Q Setting: Wi-Fi 2. Turn Wi-Fi on by sliding button to the right. *Green bar indicates ON Airplane Mode CHOOSE A NETWORK... Other...
 - 3. Use same process to turn on Bluetooth function
- 4. Select an available network when detected by the iPad, shown in area above that currently says 'Other.'
- 5. Select App Store icon (below) and open. *You will need a Wi-Fi connection available to view App Store.

Download the Hay App in the App Store by searching for 'Hay App' in the search bar in the top right corner of screen (right): *The advertisements displayed on the App Store screen will change.

The app will have the icon as shown:

Note: Operation requires 3rd generation (2012) iPad, iPad Mini, or newer with iOS8 or greater operating system.

Turn Off Auto-Lock Function

To ensure that your iPad does not periodically auto-lock or 'sleep' during periods of inactivity the auto-lock timer must be changed.

Under the Setting tab (illustrated previously), select the General settings tab (below left), and change the timer setting to Never (below right).

[C	Notifications	Storage & iCloud Usage	>	E	Airplane Mo	de	2 Minutes

Shutting Down the Hay App

1. To shut down the Hay App double click the home button (Figure A). This will show the open apps that are running on your iPad (Figure B).

*Note: By pressing the home button one time to return to the home screen, the Hay App **does not** shut down. The system will however, stop applying preservative after 10 seconds.

Figure A

2. Slide the app you want to shut down by sliding the app toward the top of the iPad, until the app is no longer visible (Figure C).

Operating the Harvest Tec iPad App

After installation of the Bluetooth Receiver (030-6672A) on to the applicator system, attach the power cord 006-3650T to supply power.

*Refer to the applicator installation manual for details on connecting the Bluetooth Receiver.

When ready to operate your applicator system, open the Hay App on the iPad by selecting the Hay App icon.

Device Selection

want to connect with.

The app will open to the Device Menu screen as shown below. Applicators which are equipped with the Bluetooth receiver that are within range (20') of the iPad and have power going to them, will be shown under the Active Connections section.

The In-Active Connections section will show applicator systems that have been connected in the past, but are not within range of the iPad or do not currently have power going to them (bottom left).

To remove a baler from the In-Active list, slide the bar displaying the baler name to the left, and select the Delete button that will appear (bottom right).

Operating the Harvest Tec iPad App (continued)

Demo Mode

Selecting the 300 Demo or 600 Demo button (below) will allow you to view the different screens of the applicator without requiring connection to an applicator system.

*This function is intended to be used as a visual aid, no values will be displayed.

Manual Selection

Selecting the Manual button (below) displayed to the right of the baler name will open the operation manual for your baler.

*You do not need to be connected to a baler to open the manual and recommended preservative tabs after a baler has been connected.

Recommended Preservative

To view recommended preservative information, application rates, and frequently asked preservative questions, select Recommended Preservative (below).

Operating the Harvest Tec iPad App (continued)

Once you have selected the baler you want to connect with from the Device Menu, the applicator main menu will display (below).

Ensure the iPad Bluetooth function is turned on in the Settings App.

*The applicator system will not appear under the Bluetooth Devices in the Settings App upon initial connection. You must open the Hay App to view the available devices by selecting the Device Menu. After you have connected through the Hay App, the system will then appear under the Bluetooth Devices in the Settings App.

Tab Descriptions

Automatic Mode: This mode allows you to use all of the applicator features such as adjusting preservative application on the go and counting total pounds of product used.

Manual Mode: Allows operator to manually turn pump on and off. This mode also has moisture content displayed. Use this mode to prime pump.

Software Versions: This will allow you to view the current software versions running on the applicator.

Setup Mode: This mode allows the operator to adjust bale rate, application rate settings and select tip output.

Job Records: Keep track of up to 300 jobs with total product used, average moisture content, tons baled, and baling date.

Device Menu: This button will take you back to the Device Menu to select an applicator to connect with.

Screen Menus

Use the screen shots below to navigate through the operation screens.

Automatic Mode

Operation Note:

Pressing the Home Button on the iPad WILL NOT stop application of the Harvest Tec System (see below):

Select Pause or Main Menu to stop application

*To close app see the Shutting Down Hay App Section

Setup Mode

Slide option to right to turn On

Job Records

Software Versions

Software Versions will change

THE UNIT MUST BE CHECKED OUT BEFORE FIELD OPERATION!

Check and Prime the Pumps

- 1. Put 10 gal (5L) of water or preservative in tank and turn main ball valve on.
- 2. Inspect for any leaks or drips at this time. If any are found tighten or replace area or fitting.
- 3. Turn controller on.
- 4. Press the SETUP MODE key. Turn the AVG Bale weight to 100 lbs (45kg), and Time Per Bale to 10 seconds and turn off the bale rate timer. Press the MAIN MENU key to return to the opening screen.
- 5. Press the MANUAL MODE key and the screen shown below will appear.

*Note: The system comes with the high tips already installed on the spray shield. Test the system with the tips you will use most often.

- 6. Turn the pump on (P1). To turn the pump on slide the button next to P1 to the right. This will turn the bar next to P1 green, indicating the pump is on.
- 7. Set the pump output to setting 1.0.
- 8. Move the pump output settings to 2.0, 3.0, 4.0 and 5.0. With the baling rate set at 18 tons/hr, the application rate actual reading should be:

Testing Liquid	Tips	Level 1.0 #/Ton (L)	Level 2.0 #/Ton (L)	Level 3.0 #/Ton (L)	Level 4.0 #/Ton (L)	Level 5.0 #/Ton (L)
\M/ator		2.8-3.3	3.6-4.2	4.6-5.4	5.8-6.8	8.2-9.7
vvaler Lov	LOW	(1.2-1.4)	(1.5-1.8)	(2.0-2.3)	(2.5-2.9)	(3.5-4.1)
Water	High	3.4-4.0	6.1-7.1	9.5-11.2	14.6-17.2	17.7-20.8
		(1.5-1.7)	(2.6-3.1)	(4.1-4.8)	(6.3-7.4)	(7.6-8.9)
Broconyotiyo	Low	1.4-1.6	2.7-3.1	3.8-4.5	5.1-6.0	6.4-7.5
Preservative		(.67)	(1.1-1.3)	(1.6-1.9)	(2.2-2.6)	(2.7-3.2)
Drocor (oti) (o	Lligh	1.9-2.3	4.7-5.5	8.4-9.8	13.3-15.6	18.1-21.3
Freservative	nign	(.8-1.0)	(2.0-2.4)	(3.6-4.2)	(5.7-6.7)	(7.8-9.1)

- 9. This process will also be used to prime the pump whenever needed.
- 10. While running pump check for a good spray pattern out of the respective tips and verify that no parts of the system are leaking.
- 11. While doing these tests the Volume Used on the bottom of the screen will be increasing, this verifies that the flow meter is functioning.
- The THS (Three Hundred Series) button displays your connection signal with the Bluetooth receiver. Green

 THS is connected, Yellow THS is connecting, Red THS not connected.
- 13. Press main menu to return to the initial startup screen. Go to Setup Mode, select Baling Rate Setup and reset your Avg Bale Weight, the time per bale and turn the Bale Rate Timer on.

Setting Up the System for initial use with the iPad

In this mode you will setup your initial application rate and baling rate.

Application Rate

After pushing the SETUP MODE key in the Main Menu screen, the top left screen will appear:

- 1. On the Setup Mode screen press the APPLICATION RATE key. Once selected the SETUP APPLICATION RATE screen will be shown. (Top right picture)
- Press any of the grey number values to the right of %MC to adjust their figures. The scroll pad shown on the bottom left will display. Remember level 1 must be lower than level 2 and level 2 must be lower than level 3. Press Done, when value has been selected. Harvest Tec products recommend set points of 16, 22, and 26 % MC levels. These are preset from the factory. Press Back to return.
- 3. To change rate of chemical application, press any of the grey number values to the right of RATE. Remember level 1 must be lower than level 2 and level 2 must be lower than level 3. Press Done, when value has been selected. Harvest Tec products recommend rates of 4, 8, and 16 lbs/ton (2,3,8 L/MT). These rates are preset from the factory. Press Back to return to previous screen. **IT IS THE OPERATORS RESPONSIBILITY TO FOLLOW THE RECOMMENDATIONS OF THE PRESERVATIVE. ONLY THE OPERATOR CAN APPLY THE PROPER RATE.**
- 4. To set the alarm, press the grey number value and set the level at which you want the alarm to activate. To turn the alarm off, set level above 50.
- 5. Press the grey area next to Tip Output to **cycle between the high and low sets of tips**. Use the correct tip set for the field conditions.
- 6. The menu will appear to choose between Low and High Output tips. Based on 4, 8, 16 #/Ton application rates, select the one that best represents your ton/hr rate: Low 3-7 Ton/hr, High 4-25 Ton/hr.
- 7. The tip confirmation screen will appear. Press OK once tips are changed.
- 8. Next press the BACK key found on the bottom left hand figure of the screen to return to SETUP MODE screen or press MAIN MENU key on bottom right hand figure of the screen to return to opening screen.
- 9. Press OPTIONS to adjust the unit between metric and standard units.

Baling Rate Settings – Small Square Balers

After pushing the SETUP MODE key in the Main Menu screen, the screen on the left will appear:

- 1. On the setup mode screen press the BALING RATE SETUP key.
- Press the grey number value to the right of AVG Bale Weight (Lbs). To adjust the weight of your bales, the scroll tool shown on the right will display. Scroll through the values to select correct information, press DONE when value has been selected. The information will be saved until updated. Use the same procedure for adjusting time per bale.
- 3. Small square balers are equipped with a Bale Rate Timer which can be turned ON by sliding the bar to the right as shown above. A green bar indicates that the bale rate sensors are on. While a grey bar means the bale rate sensors are off.

Note: Bale rate sensors are used instead of a fixed time per bale to help determine a real time ton per hour reading.

4. Press the BACK key found on the bottom left hand figure of the screen to return to SETUP MODE screen or press the MAIN MENU key to return to the opening screen.

Operation Instructions

Automatic mode will automatically apply product based on hay moisture content sensed by the moisture sensors and the operator's presets. See SETTING UP SYSTEM FOR INITIAL USE to change any settings.

Automatic Mode

After pushing the AUTOMATIC MODE key in the Main Menu screen, the following screen will appear:

- 1. The graph shows the moisture trend from the past 90 seconds in 3 second intervals.
- 2. The moisture content is shown in the upper right hand corner.
- 3. The THS (Three Hundred Series) button displays your connection signal with the Bluetooth receiver. Green – THS is connected, Yellow – THS is connecting, Red – THS not connected.
- 4. Baling Rate and Application Rate are shown in the middle of the screen. The operator sets the target application rate and baling rate in the setup mode; the actual rate should be within +/- one pound.
- 5. Last Bale Moisture, Tons Baled, and # Used (pounds used) will show at the bottom of the screen. These numbers will only reset once a new job record is created. NOTE: Initial start-up requires pressing the New Job key in the Job Records screen in order for Volume Used accumulation to be recorded. This only needs to be done once on initial start-up of system and not every time. (See JOB RECORDS screen)
- 6. To pause the unit while in operation select the Pause key.
- 7. Push the OVERRIDE key to turn the pump for full output of the system. Use this mode when going through a short area of wet crop.
- 8. Press the MAIN MENU key to return to the opening screen.

Manual Mode

After pushing the MANUAL MODE key in the Main Menu screen, the following screen will appear: **Manual mode will apply preservative to the hay at a fixed rate regardless of the moisture.**

- 1. This graph shows the moisture trend from the last 90 seconds of baling (one every 3 seconds).
- 2. The moisture content is shown in the upper right hand corner.
- The THS (Three Hundred Series) button displays your connection signal with the Bluetooth receiver. Green – THS is connected, Yellow – THS is connecting, Red – THS not connected. Pressing MAIN MENU key to return to the initial startup screen.
- 4. Baling rate and Application rate are shown in the middle of the screen.
- 5. To turn the pump on, by moving the slider next to P1, so it shows green. In Manual Mode (regardless of moisture, baling rate or bale weight) the outputs are fixed rates.
- 6. Slide the pump output button from level $1.0 \rightarrow 5.0$ to increase the amount of preservative being applied. The application rates are shown below. Pump outputs are considered normal when they are within +/- 8%.

Testing Liquid	Tips	Level 1.0 Lbs/HR (L)	Level 2.0 Lbs/HR (L)	Level 3.0 Lbs/HR (L)	Level 4.0 Lbs/HR (L)	Level 5.0 Lbs/HR (L)
Water	Low	50.9-59.8 (21.8-25.6)	65.0-76.3 (27.9-32.7)	82.2-96.5 (35.2-41.4)	104.6-122.8 (44.8-52.6)	148.1-173.9 (63.5-74.5)
Water	High	61.6-72.4 (26.4-31.0)	109.2-128.2 (46.8-54.9)	171.4-201.2 (73.5-86.3)	263.4-309.2 (112.9-132.6)	318.9-374.4 (136.7-160.5)
Preservative	Low	24.8-29.2 (10.6-12.5)	47.8-56.2 (20.5-24.1)	69.0-81.0 (29.6-34.7)	92.0-108.0 (39.4-46.3)	115.0-135.0 (49.3-57.9)
Preservative	High	35.0-41.0 (15.0-17.6)	84.6-99.4 (36.3-42.6)	150.9-177.1 (64.7-75.9)	239.2-280.8 (102.5-120.4)	326.6-383.4 (140.0-164.3)

- 7. Last Bale Moisture, Tons Baled, and # Used (pounds used) will show at the bottom of the screen. These numbers will reset once a new job record is created NOTE: Initial start-up requires pressing the New Job key in the Job Records screen in order for Volume Used accumulation to be recorded. This only needs to be done once on initial start-up of system and not every time. (See JOB RECORDS screen)
- 8. To pause the unit during operation select the Pause key.
- 9. Push the OVERRIDE key to turn on the pump for full output of the system. Use this mode when going through a short area of wet crop.
- 10. Pressing MAIN MENU will return you to the opening screen.

Job Records

After pushing the JOB RECORDS key in the Main Menu screen, the following screen will appear:

- 1. Select the New Job tab when creating a new job record.
- 2. Type in the desired field name and press Create Job
- 3. The job details screen will appear with name of the job shown under the up arrow. Information shown on this screen will include Date, Total Baled (tons baled), Product Used, Average Moisture Content, Highest Moisture Content and Bales.
- 4. Every time the NEW JOB key is pressed the accumulated pounds on auto and manual modes will be reset to zero. After 300 jobs have been stored, the next time the NEW JOB key is pressed the system will start over with job one and the old job will be replaced.
- 5. To return the opening screen, press the MAIN MENU key. NOTE: Initial start-up requires pressing the New Job key in the Job Records screen in order for Volume Used accumulation to be recorded. This only needs to be done once on initial start-up of system and not every time the system is started for operation.

Software Versions

After pushing the Software Versions key in the Main Menu screen, the following screen will appear:

*This is an example, Software Versions will change

- 1. The first line will show the current version of the Hay App being used on the iPad. Note: When an update is available, your iPad will prompt you when connected to the internet
- 2. The second line will show the current version of software being used on the Three Hundred Series (THS) applicator system.

Note: Any software updates that are available will be shown at: harvesttec.com/product-updates/

Maintenance

If you are unsure how to perform any of the maintenance steps have your local authorized dealer perform the tasks.

Maintenance Schedule

	Daily	10 hrs	400 hrs	Weekly	Monthly	Season
Diagnostics	Х					Х
Filter bowl cleaning		Х				Х
Tips & tip screen cleaning		Х				Х
Tank lid cleaning		Х				Х
Dielectric grease connections					Х	Х
Rebuild pump			Х			
Battery connections				Х		Х
Check valves			Х			
Visually inspect hoses				Х		Х

Filter bowl cleaning: The filter bowl is located in front of the applicators tank and is connected to the ball valve. Before cleaning the filter bowl all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

Verify that the ball valve located next to the pump is turned off. Locate the filter bowl on the side of the pump manifold (A). Unscrew the bottom section of the filter bowl and remove the strainer (B). Clean off any debris and soak in warm water with a mild soap if necessary. Once the screen is clean reinstall by following the directions in reverse.

<u>Maintenance (continued)</u> Bluetooth Receiver Lights

New for production year 2018. All Bluetooth receivers (030-6672A) are now equipped with lights to indicate both power and Hay App connection on the Apple iPad. Clean light regularly Red Light – The Bluetooth receiver has power Green Light – The Bluetooth receiver is connected to the Hay App.

Tips & tip screen cleaning: Before cleaning the tips and screens all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

Verify that the ball valve located next to the pump is turned off. Disconnect spray shield from hangers if possible or remove tips in place. Remove the tip, and screen if equipped. Some models may require a wrench to remove. Clean off any debris and soak tip and screen in warm water with a mild soap if necessary. Once the tips and screens are cleaned reinstall by following the directions in reverse.

Tank lid cleaning: Before cleaning the tank lid all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

The tank lid is located on the top of the tank. Unscrew the tank lid and bring down ground level. Use compressed air clean out the tank screen (D). If the screen cannot be thoroughly cleaned with compressed air, replace fitting (005-9022B3). Once the screen is cleaned reinstall the cover.

Dielectric grease connections: Disconnect all harnesses on the applicator, clean the connections, and repack with dielectric grease.

Rebuild pump: If Manual mode show that the pump is running lower than normal, a pump rebuild may be necessary. To do this rebuild the pump must be removed from the pump manifold. Pump rebuild is part no. 007-4581. A service pack that includes pump rebuilds and check valves is available from your local dealer.

Verify that the ball valve is turned off. Before working around the pumps all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves). Remove pump from manifold. Follow rebuild instructions supplied with pump rebuild kit. Reinstall after rebuild is complete.

Battery connections: Follow the batteries safety warnings and clean the battery connections. If the connections cannot be cleaned, replace harness.

Solenoid Valves: Before servicing the solenoid all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves), inlet side of solenoid could be under pressure Clean the solenoid valve body (004-1207VF).

Verify the ball valve is turned off before service the solenoid. Replace the solenoid if needed (002-2203F).

Miscellaneous maintenance:

- 1. Depending on the product being used, the system may need to be flushed with water at a regular interval (consult with manufacturer of the chemical.) If Harvest Tec product is being used, flushing is not necessary.
- 2. Although the pump can run dry, extended operation of a dry pump will increase wear. Watch the preservative level in the tank.
- 3. If you are using bacterial inoculants, flush your system daily after every use.

Winter Storage

- 1. Thoroughly flush the system with water.
- 2. Remove the filter bowl and run dry until the water has cleared out of the intake side.
- 3. Drain all lines on the outlet side.
- 4. Never use oils or alcohol based anti-freeze in the system.
- 5. For spring start-up, if the pump is frozen, turn off the power immediately to avoid burning the motor or damaging the circuit board. The pump head can be disassembled and freed or rebuilt in most cases
- 6. Disconnect power from the Three Hundred Series (THS) control Box.
- 7. Remove display from tractor and store in a warm, dry place.

Wiring Diagram - 344, 345, 350, 351

1. Connect the power harness (006-3650T) to the tractor battery (12 volt) using the red wire with fuse to the positive side and the black wire to the negative.

A. The power harness must be connected to the battery! The unit will draw more amps than convenience outlets can handle. Any modifications of the power harness will void systems warranty. CONTACT HARVEST TEC BEFORE MODIFICATIONS.

- B. This unit will not function on positive ground tractors.
- C. If the unit loses power while operating it will not keep track of accumulated pounds of product used.
- 2. The power harness on the tractor (006-3650T) will run from the tractor battery to the hitch. The power harness on the baler (006-3650B1) will connect to the tractor power harness (006-3650T) at the hitch.
- 3. Connect the keyed power wire (006-5650K) to a keyed power source on the tractor. **The keyed power** wire must connect to a keyed source or the unit will not power up correctly.
- 4. Attached the Bluetooth Receiver (030-6672B) to the tractor power harness (006-3650T). Mount the Bluetooth receiver in a safe location as close to iPad as possible in cab.
- 5. Attach the End of Bale (EOB) connection on the controller to the End of Baler Sensor (006-7400).
- 6. Attach the Solenoid (V1) (Delphi connector) connection on the controller to the wire from the solenoid (002-2203F). Note: If solenoid is connected to V2-DSM (not used) connection, solenoid will not work.
- Attach the Flowmeter (FLOW) connection on the controller to the flowmeter (006-4729A).
 Attach the spade connectors on the FLOW harness to the Pump (007-4120DE).

System wiring diagram

Common Questions

1. How do I turn the system on/off?

To turn the system ON open the Hay App, then select the active system for the baler you are using.

To turn the system OFF click the Main Menu screen. To close the app double click the home button on the iPad and swipe the app that you would like closed, toward the top of the screen until it is no longer visible. See SHUTTING DOWN THE HAY APP for more details.

2. How to get in the LBS/TON, MC%, and TONS/HR screens?

In the Main Menu press the SETUP MODE key. From this screen you can change your application rates and how much product is applied. See SETTING UP FOR INITIAL USE for a detailed explanation of this process.

3. The unit is stuck in the Application Rate screen.

In the Application Rate screen, level 1 must be less than level 2, and level 2 must be less than level 3. For example, if level 1 is set at 16, level 2 must be set at 17 or higher, and level 3 must be set higher than level 2.

4. How does OVERRIDE work?

Override turns on the pump and opens the solenoid for full output. The pump and solenoid will remain at full output until the operator turns the pump off by pressing the OVERRIDE key again.

5. The flow meter reading is more or less than the programmed level set in the box.

Some variation in flow meter readings compared to the programmed set point is normal due to factory tolerances on the pump motor as well as varying tractor voltages inputted to the control box. The flow meter reading is an accurate measure of how much product is actually being applied. The set points then will need to be adjusted if you want to attain a different flow meter reading.

6. The moisture content displays "LO" or "HI" all the time.

When the moisture content display does not change frequently while baling, there is likely a faulty star wheel connection. Initially check inside the white star wheel block, to see if the electronic swivel is in the star wheel shaft and that the star wheel shaft is not coming out of the block. Also, check all star wheel wires and connectors to see if there is a continuity of grounding problem.

7. Should the battery connections be removed before jump starting or charging a battery? Yes. Anytime the tractor will have voltage going up rapidly the connections should be removed.

8. What is the expected battery life of the iPad when baling?

3.5 hours is the expected amount of time for the battery when continuously baling. Shut off all other applications, wireless internet, and Wi-Fi signal to reduce the amount of programs iPad is running. It is recommended to use an accessory outlet charger when operating (not included with iPad). *Note: Not all chargers are designed to charge an iPad, verify before purchasing.

9. What is the max distance for connection between the iPad and the Bluetooth Receiver? The range for the connection will depend on the amount of equipment (tractor, baler, ect.) between the two devices. The max distance will range between 10' – 20'.

10. What do the lights on the 030-6672B indicate?

Red Light – The Bluetooth receiver has power. *Green Light* – When the proper active connection is selected in the Hay App menu, the green light will indicate connection with the iPad.

Troubleshooting

Problem	Possible cause(s)	Solution(s)
Pump will not run	1 No voltage to THS	1. Check for short, low voltage, and
	1. No voltage to 1115.	replace fuse if necessary.
	2. Pump locked up.	2. Clean or rebuild pump if motor ok
	3. Damaged wire.	3. Repair damaged wire.
	4. Damaged solenoid	4. Replace / Clean
Pump runs but will not prime.	1. Air leak in intake.	1. Tighten fittings on intake side.
	2. Clogged intake.	2. Clean.
	3. Restricted outlet.	3. Check and clean tips.
	4. Check valve stuck closed.	4. Clean or repair check valve.
	5. Dirt inside pump.	5. Replace pump check valve.
Pump does not develop enough output.	1. Air leaks or clogs on inlet.	1. Tighten or clean filter bowl
	2. Pump worn or dirty.	2. Rebuild pump.
Moisture reading errors	1. Wire disconnected or bad	
(reading high or low)	connection between star wheels and THS	1. Reconnect wire.
	2. Low power supply to THS	2. Check voltage at box. Min of 12V
	3. Hay over 32% moisture	
	4. Ground contact with one or both star wheels and THS	4. Reconnect.
	5. Short in wire between star wheels and THS	5. Replace wire.
Moisture Reading Erratic	1. Check all wiring connections for corrosion or poor contact.	 Apply dielectric grease to all connections.
	2. Check power supply at tractor. Voltage should be constant between 12V-14V	2. Install voltage surge protection on tractors alternator.
Product is less than actual product used.	1. Voltage supplied to flow meter is less than 11 volts.	1. Check for a min of 11 volts supplied at THS.
	2. Wiring short in signal to baler mounted processor.	2. Inspect wire and replace if necessary.
	3. Using product other than Harvest Tec	3. Catch and weigh product to check outputs.
Product shown is 10% different than actual product used.	1. High voltage supplied to the meter.	1. Check voltage at THS. Max of 18 volts.
	2. Air leak in intake.	2. Look for air bubbles in line. Replace line or other defective area that is allowing air into the system.
	3. Using product other than Harvest Tec	3. Catch and weigh product to check outputs.
System leaks product out of tips after shut down.	1. Dirty or defective solenoid	1. Clean or Replace.
System does not pause at the end of a row.	1. Short in cable.	1. Replace cable.
Solenoid will not pulse	 Dirty or plugged solenoid Damaged wire from control Wire disconnected 	 Clean or Replace Repair Reattach
Bluetooth Receiver lights will not illuminate	 Bluetooth receiver not connected Harness disconnected Low power 	 Check connections and voltage. Minimum 12.5V needed.
	Red Light – The Bluetooth receive Green Light – When the proper ac menu, the green light will indicate	er has power stive connection is selected in the Hay App connection with the iPad.

iPad Troubleshooting

iPad Symptom	Troubleshooting
iPad won't turn on	-Turn your iPad off and on. Press and hold the
	Sleep/Wake button for a few seconds until a red slider
	appears; then slide it. Press and hold the Sleep/Wake
	button to turn on again.
	-Reset your iPad. Press the "Sleep/Wake" button and
	the "Home" button simultaneously for at least 10
	seconds until the Apple logo appears on the screen.
	This reset will not damage your files.
	-Battery may be drained. Plug iPad into your computer
	or AC adapter and see if anything happens. The iPad
	will recognize it has been connected to a power source
	bettery must be ewepped with a replecement bettery
	Battery lovel displays in ten right corner of iPad
Cannot get an active baler connection	Make sure that your Bluetooth accessory and iOS
Carnot get an active baler connection	device are close to each other when connecting
	-Make sure that your Bluetooth accessory is on and fully
	charged or connected to power. If it uses batteries, test
	them to see if they need to be replaced.
	-Restart your Bluetooth receiver, by removing power
	and reconnecting after 30 seconds.
	-Make sure that you have at least a 3rd generation iPad
	with iOS8 or greater operating system on your iPad
	-On your iPad, go to Settings > Bluetooth and make
	sure that Bluetooth is on. If you can't turn Bluetooth on
	or you see a spinning gear, restart your iPad
	-Unpair the Bluetooth accessory, put the accessory back
	in discovery mode, then pair and connect it again. By
	tapping on its name in the Bluetooth accessories tab
	dovice's name, then Unnair
	Display connector plug and bale rate sensors plug are
	switched on THS. Switch connections
	-Short in display cable. Replace the cable.
iPad touchscreen is slow or does not respond	-Screen may be dirty. Clean screen. Unplug everything.
·	turn off iPad and with soft, lint-free, slightly damp cloth
	gently wipe screen. DO NOT use window cleaners and
	paper towels.
	-If you have a screen protector sheet, try removing it.
iPad is not charging or is slow to charge	-In order to charge your iPad you can try either
	connecting your iPad to a power outlet or connecting to
	a USB 2.0 port on a computer. However, note that
	computers generally don't supply enough power to their
	USB ports to be able to charge an IPad. When this

030-2014MK (Includes All Parts)

Installation Instructions

- 1. Identify 12V power source for wires to connect.
 - a. Eye loops included if wiring directly to the battery is desired.
 - b. Test for key power source if preferred to have power to the USB shut off with the key.
- 2. Once power source is identified, cut wires to desired length.
- 3. Crimp the two supplied quick connectors onto each the white and black wire.
- 4. Remove the round locking plastic nut from USB plug before connecting the wires. Black (+) White (-).
- 5. The wires will then be hooked to the designated terminals on the bottom of the USB plug
- 6. Drill a 1 1/8" hole in the preferred mounting location. Be sure to clean any sharp edges after drilling.
- 7. Feed the wires through the mounting hole.
- 8. If using the round plastic nut to secure plug in place, slide the nut back over the wiring before connecting the wires to powered source.
- 9. Connect the wires to the identified power source if easier to do so before tightening the plug into place.
- 10. Tighten plug using either the round plastic nut or mounting plate and two screws, both options supplied.
- 11. Once connected, hook a USB charging cord into the plug and connect a mobile device/tablet to ensure the plug is operating as you wish (key power working properly if necessary).

NOTE: This plug is not designed to charge two iPads. System damage could occur if this is attempted. System will charge a mobile phone and iPad simultaneously without problem.

6	Eye loop connector	Hardware	2	Mou	nting Kit Asse	mbly	030-4670E (Includes All F	OK Parts)

Installation Instructions

- 1. Identify 12V power source for wires to connect.
- 2. Eye loops included if wiring directly to the battery is desired.
- 3. Test for key power source if preferred to have power to the USB shut off with the key.
- 4. Once power source is identified, cut wires to desired length.
- 5. Crimp the two supplied quick connectors onto the white and black wire.
- 6. Remove the round locking plastic nut from USB plug before connecting the wires. Black (+) White (-).
- 7. The wires will then be hooked to the designated terminals on the bottom of the USB plug
- 8. Drill a 1 1/8" hole in the preferred mounting location. Be sure to clean any sharp edges after drilling.
- 9. Feed the wires through the mounting hole.
- 10. If using the round plastic nut to secure plug in place, slide the nut back over the wiring before connecting the wires to powered source.
- 11. Connect the wires to the identified power source if easier to do so before tightening the plug into place.
- 12. Tighten plug using either the round plastic nut or mounting plate and two screws, both options supplied.
- 13. Once connected, hook a USB charging cord into the plug and connect a mobile device/tablet to ensure the plug is operating as you wish (key power working properly if necessary).

NOTE: This plug is not designed to charge two iPads. System damage could occur if this is attempted. System will charge a mobile phone and iPad simultaneously without problem.

Notes

Harvest Tec Inc. Warranty and Liability Agreement

Harvest Tec, Inc. will repair or replace components that are found to be defective within 12 months from the date of manufacture. Under no circumstances does this warranty cover any components which in the opinion of Harvest Tec, Inc. have been subjected to negligent use, misuse, alteration, accident, or if repairs have been made with parts other than those manufactured and obtainable from Harvest Tec, Inc.

Our obligation under this warranty is limited to repairing or replacing free of charge to the original purchaser any part that in our judgment shows evidence of defective or improper workmanship, provided the part is returned to Harvest Tec, Inc. within 30 days of the failure. If it is determined that a non-Harvest Tec branded hay preservative has been used inside the Harvest Tec applicator system where the failure occurred, then Harvest Tec reserves the right to deny the warranty request at their discretion. Parts must be returned through the selling dealer and distributor, transportation charges prepaid.

This warranty shall not be interpreted to render Harvest Tec, Inc. liable for injury or damages of any kind, direct, consequential, or contingent, to persons or property. Furthermore, this warranty does not extend to loss of crop, losses caused by delays or any expense prospective profits or for any other reason. Harvest Tec, Inc. shall not be liable for any recovery greater in amount than the cost or repair of defects in workmanship.

There are no warranties, either expressed or implied, of merchantability or fitness for particular purpose intended or fitness for any other reason.

This warranty cannot guarantee that existing conditions beyond the control of Harvest Tec, Inc. will not affect our ability to obtain materials or manufacture necessary replacement parts.

Harvest Tec, Inc. reserves the right to make design changes, improve design, or change specifications, at any time without any contingent obligation to purchasers of machines and parts previously sold.

Revised 4/17
