Introduction

Thank you for purchasing a HayBoss G2 Model 696A Hay Preservative Applicator. This 696A applicator system has been designed to plug directly into the baler's ISOBUS and display on a C1000 monitor. The 696A Preservative Applicator System offers these advantages;

1. Operation coordinated with baler operation
2. Less cab clutter providing better visibility
3. Ease of use with all information on one screen
4. Records kept together
5. And the system is ready for future updates.

The 696A HayBoss G2 Preservative Applicator System is designed to apply buffered propionic acid to the forage crop as it is baled. The 696A applicator will adjust the rate of application based on moisture and tonnage of the crop being harvested. This manual will take you through the steps of installing the applicator. Please read this manual carefully to learn how to install the equipment correctly. Failure to do this can result in personal injury or equipment malfunction. If you are unsure about installing the system after consulting this manual, contact your local authorized dealership for additional assistance or look for the contact information on the back cover of this manual. If you are in need of parts for the system please view the Parts Breakdowns toward the back of this manual and contact your local authorized dealer to order the parts. This applicator is designed to apply AGCO buffered propionic acid.

Right and Left sides are determined by facing in the direction of forward travel.

System Requirements

**The Baler Processor must have Version 3.3 or higher.
C1000 must have version 3.0.1 or higher**

Installation Kit Reference Chart

BALER MAKE	MODEL	INSTALL KIT
AGCO Hesston	7433-7444	030-4518B
	7433-7434 roto-cutter	030-4519B
	2150 – 2190	030-4518B
	2150 – 2190 roto-cutter	030-4519B
	2150 – 2190 packer cutter	030-4527B
	2250 & 2270 ProCut	030-4542B
Challenger	LB33B – LB44B	030-4518B
	LB33B – LB34B roto-cutter	030-4519B
	LB33B – LB34B packer cutter	030-4527B
Massey Ferguson	2140 – 2290	030-4518B
	2140 – 2290 with roto-cutter	030-4519B
	2150 & 2250 packer cutter	030-4527B
	2170XD & 2270XD with roto-cutter	030-4530B

Tools Needed:

- Standard wrench set
- Crescent wrench
- Standard socket set
- Hose cutter
- Electric drill and bits
- Standard screwdriver
- Hammer
- Center punch
- Side cutter
- Standard nut driver set
- Metal cutting tools

Installation of Applicator

1. Installation of Pump Manifold and Saddle Pre-Setup

For 3 X 3 balers only

Locate parts bag 2. Install both saddle legs (001-6707C) onto the saddle (001-6707A) with eight 3/8" x 1-1/4" Bolts, locks and flat washers. Note: the slots in the legs will attach to the second and fourth weld nuts in from each end, of the saddle, on both sides.

1. Once legs and saddle are loosely attached measure the distance from the top outside corners of the bale chamber where the saddle will be attached. Move legs in or out so the outside edges will match this dimension. Also try to center the saddle within these dimensions. Do not fully tighten bolts until mounted on the baler
2. Locate parts bag 6. Mount the pump plate support legs (001-6707FL & 001-6707FR) to the saddle legs using six 3/8" x 1" bolts, locks, flats, and nuts. Note: this will be the side that is opposite of the "V" notch that is in the sump cut out of the saddle
3. Attach the pump plate mounting bracket (001-4646C) to the pump plate support legs with two 3/8" x 1-1/4" bolts, locks, flats, and nuts.
4. Attach the pump plate holder (001-4646D) to the pump plate mounting bracket (001-4646C) using four 3/8" x 3/4" flange head bolts

For 3 X 4 and 4 x 4 balers only

Locate parts bag 2. Install both saddle legs (001-6707C) onto the saddle (001-6707A) with eight 3/8" x 1-1/4" Bolts, locks and flat washers. Note: the slots in the legs will attach to the first and second weld nuts in from each end, of the saddle, on both sides.

1. Once legs and saddle are loosely attached measure the distance from the top outside corners of the bale chamber where the saddle will be attached. Move legs in or out so the outside edges will match this dimension. Also try to center the saddle within these dimensions. Do not fully tighten down bolts until mounted on the baler.
2. Locate parts bag 6. Mount the pump plate support legs (001-6707FL & 001-6707FR) to the saddle legs using six 3/8" x 1" bolts, locks, flats, and nuts. Note: this will be the side that is opposite of the "V" notch that is in the sump cut out of the saddle
3. Attach the pump plate mounting bracket (001-4646C) to the pump plate support legs with two 3/8" x 1-1/4" bolts, locks, flats, and nuts.
4. Attach the pump plate holder (001-4646D) to the pump plate mounting bracket (001-4646C) using four 3/8" x 3/4" flange head bolts

The Pump Controller and pump heads must be pointing down. Failure to mount the pump plate assembly in this specified direction will void all warranty of the Pump Controller and pumps

2. Installation of Dual Channel Processor (DCP)

Follow the instructions below to mount the Dual Channel Processor (DCP 006-6671LS) onto your specific baler model and type. The locations shown are the right twine box (looking at the back of the baler). Mark and drill the four 3/8" holes and install DCP with two 5/16" x 1" bolts in the bottom two holes, two 5/16" x 1-1/4" bolts in the top two holes, locks, fender washers and hex nuts. Leave bolts loose. Mount the DCP cover (001-5650X) to the top two 5/16" x 1-1/4" bolts. It will fit between the mounting foot of the DCP and the sheet metal of the baler. Now tighten all bolts.

Baler Type	Model number	Figure	A	B	C
AGCO Hesston	7433 – 7444 2150 – 2190 2250 – 2290	2	12"	3"	N/A
Challenger	LB 33B – 44B	2	12"	3"	N/A
Massey Ferguson	2150-2190 2250-2290	2	12"	3"	N/A

3. Installation of Tank and Star Wheel Moisture Sensors

Tank Mounting-Locate parts bag C & 2. Mount the tank legs and saddle on the baler as shown below, just behind the compression arm. The tank legs bolt to the baler with six $\frac{1}{2}$ " x 1-3/4" carriage head bolts, lock & flat washers, and hex nuts. The bolts should be inserted from inside the baler.

The saddle is intentionally tipped forward by 5° so that the tank cap will be parallel to the ground. There is a small cut out "V" where the tank sump fits in the saddle and this cut out should face the back of the baler for the tank to be level when installed on the baler

Star Wheel Mounting-The star wheels are to be mounted on top of the baler, just behind the knotters and under the walkway on both sides. The notch and holes for the star wheel are precut. **If the star wheels are cutting the twine the sensors and notch must be moved out an additional $\frac{1}{2}$ inch. Use the template in the back of the manual for hole spacing.** Place the spacer plate (001-6707E) over the precut holes. Attach with 5/16" x $\frac{1}{2}$ " Allen head bolts and internal star washers from inside the bale chamber. Center the star wheels over the top of the spacer plate, place the twine diverters on top of the star wheel and attach with 5/16 x 2 $\frac{1}{4}$ " hex bolt and lock washers. For remainder two holes per star wheel attach with 5/16 x 2 $\frac{1}{4}$ " hex bolt, lock washer, and one 5/16" thick flat washers per bolt. Verify that star wheels align with bale chamber before tightening down all hardware. **The twine guard containing the bale rate sensors will be placed on the right side of the baler.** See Step 8 for directions on how to hook-up the star wheel wires.

Applicator shown on four foot wide baler.

4. Installation of End of Bale Sensor

The end of bale sensor determines the position of the needles on the baler. When the needles cycle the sensor communicates this information to the Dual Channel Processor (DCP). This information is used for job records and will be used by the optional Bale Identification System. Follow the steps below for your baler to mount the sensor.

End of bale sensor bracket (001-4648) will be used. Cutoff excess metal not used during installation.

Mount the end of bale sensor bracket (001-4648) as shown in the 8" hole position. Mark and drill two 3/8" holes and attach the bracket using two 5/16" x 1" self-tapping screws, and 5/16" flange nuts. Mount the sensor in the 8" hole location, keep the sensor 1/4" from the needle arm and tighten both nuts. Cut off excess metal past the sensor. Run the sensor cable up to the Dual channel Processor (DCP) and secure to the baler.

5. Installation of the Drain & Fill Line

- A. Locate parts bag 1.
- B. Thread $\frac{3}{4}$ " elbow fitting into end of tank.
- C. Run hose from the elbow down the frame to the bottom of the baler.
- D. Drill $\frac{1}{4}$ " holes to accept the valve holder bracket and use $\frac{5}{16}$ " x 1" self-tapping screws.
- E. Connect valve assembly to other end of hose. Place hose clamps on both ends.
- F. Secure hose to frame using cable locks.
- G. Install supplied safety decals (DCL-8001 & DCL-8005) next to the ball valve assembly.

6. Installation of Spray Shield

The spray shield assembly is designed to spray the hay evenly as the baler picks it up. Sketches of the spray shield nozzle holders are shown below.

Installation of Spray Shield Kit 4518B

Remove the four bolts attached to the wrapper stripper plates as shown above. Replace with the four supplied $\frac{3}{8}$ " x $1\frac{1}{4}$ " carriage bolts, nuts, locks, and flat washers. Mount the spray shield holders (001-4435H) and loosely tighten down hardware. Install spray shield and secure with the two supplied lynch pins. Tighten all hardware. Use the inside slots on 3x3 balers and the outside slots on 3x4 and 4x4 balers.

Installation of Spray Shield Kit 4519B

Locate bottom hole on each side of center insert over top auger and bolt spray shield and mounting bracket into place using the $\frac{3}{8}$ " x $1\frac{1}{4}$ " carriage bolts, nuts, locks, and flat washers. Use the inside slots on 3x3 balers and the outside slots on 3x4 and 4x4 balers.

Installation of Spray Shield Kit 4527B

Mount the two spray shield mounting brackets (001-4435HPC) to the baler as shown above. Attach using four 3/8" x 1-1/4" bolts, flats, locks, and nuts. Mount the spray shield (001-4435ES) on top of the mounting brackets and secure with two lynch pins. Use the inside slots on 3x3 balers and the outside slots on 3x4 and 4x4 balers.

Installation of Spray Shield Kit 4530B

Locate the two bolts shown in figure A directly below the baler's flywheel. Connect the two mounting brackets (001-4435XB) to figure A using the existing hardware. Connect the mounting brackets to the shield holder (001-4435XA) using four 3/8" x 1" hex bolts, lock washers, and hex nuts. Install the spray shield assembly (001-4435AS) and secure with two supplied lynch pins.

Installation of Spray Shield Kit 4542B

Locate the baler cross support bar below the baler's flywheel. Connect the mounting bracket (001-4435NAX) as shown in figure A. Connect the mounting bracket to baler using two 3/8" x 1 1/4" hex bolts, lock washers, and hex nuts. Install the spray shield assembly (001-4435NSX) as shown in figure B and secure with supplied lynch pins.

7. Plumbing

- A. Locate the three 1/4" hoses colored clear, blue, and green. The pumps will need to be connected to specific tips so the pump numbers are as follows: Pump 1 is closest to the filter bowl, pump 2 is in the middle, and pump 3 is the outside pump.
- B. Slide the jaco nut over the end the hose and insert the hose into the jaco fitting and tighten the jaco nut. Because all nozzles on the spray shield are different, the operator will need to install pump 1 to the orange tips using the clear hose, pump 2 to the green tips using the green hose and pump 3 to the blue tips using the blue hose.
- C. **KEEP HOSE AWAY FROM: MOVING PARTS, SHARP METAL, AND HYDRAULIC LINES. WORKING TEMPERATURE FOR THE HOSE IS 140 °F AND UNDER.**
- D. Tie the hose down at secure locations on the baler using the enclosed tie straps and cable clamps.

High and Low Output Tips

Your baler comes with two sets of tips: a high set and a low set. **The High set comes factory installed.**

-The High set will cover outputs of 84 to 632 lbs/hr (Approx. 21-63 tons/hr) Install these tips:

- Clear hose to orange tips (004-TT11001VP)
- Green hose to green tips. (004-TT110015VP)
- Blue hose to blue tips. (004-TT11003VP)

-The Low set will cover outputs of 44 to 400 lbs/hr (Approx. 11-40 tons/hr) Install these tips:

- Clear hose olive green tips. (004-800067PT)
- Green hose to orange tips. (004-TT11001VP)
- Blue hose to olive green tips. (004-TT110015VP)

If you switch tips be sure to change the tip output setting (in the software through the display) under Application Rate. Instructions to change the application rate are in the Operator's Manual under "Application Rate: Selecting High or Low tips."

8. Installation of Star Wheel and Bale Rate Harness

First, remove the cover from the star wheel block and use a ¼" nut driver to remove the nut from the electronic swivel. Next, run the star wheel sensor wire through the black grommet and place the eye terminal on the star wheel sensor. Tighten the eye loop with the nut on the sensor and put the star wheel cover back on the base. Next, tighten the grommet to form a tight seal around the wire. The bale rate sensors will be factory installed on the right side twine guard in the correct position. The sensor with the longer sensor wire should say "FRONT", which indicates it should be placed in the front sensor hole. The sensor wire with the shorter wire should say "BACK." The tip of the sensor should be placed no more than ¼" away from the star wheel teeth and no less than 1/8" from the star wheel teeth. Each sensor will have an LED light located on the sensor by the diverter. Once the unit is powered up spin the wheel and make sure that both led lights turn on and off. If they don't turn on and off, adjustments may need to be made.

Once the star wheel connection is complete, run the harness along the baler frame to the Dual Channel Processor (DCP). (See wiring installation on the following page.) The Dual Channel Processor is located on the back of the right twine box.

9. Main Wire Harness and Baler Interface Harness Routing and Connections

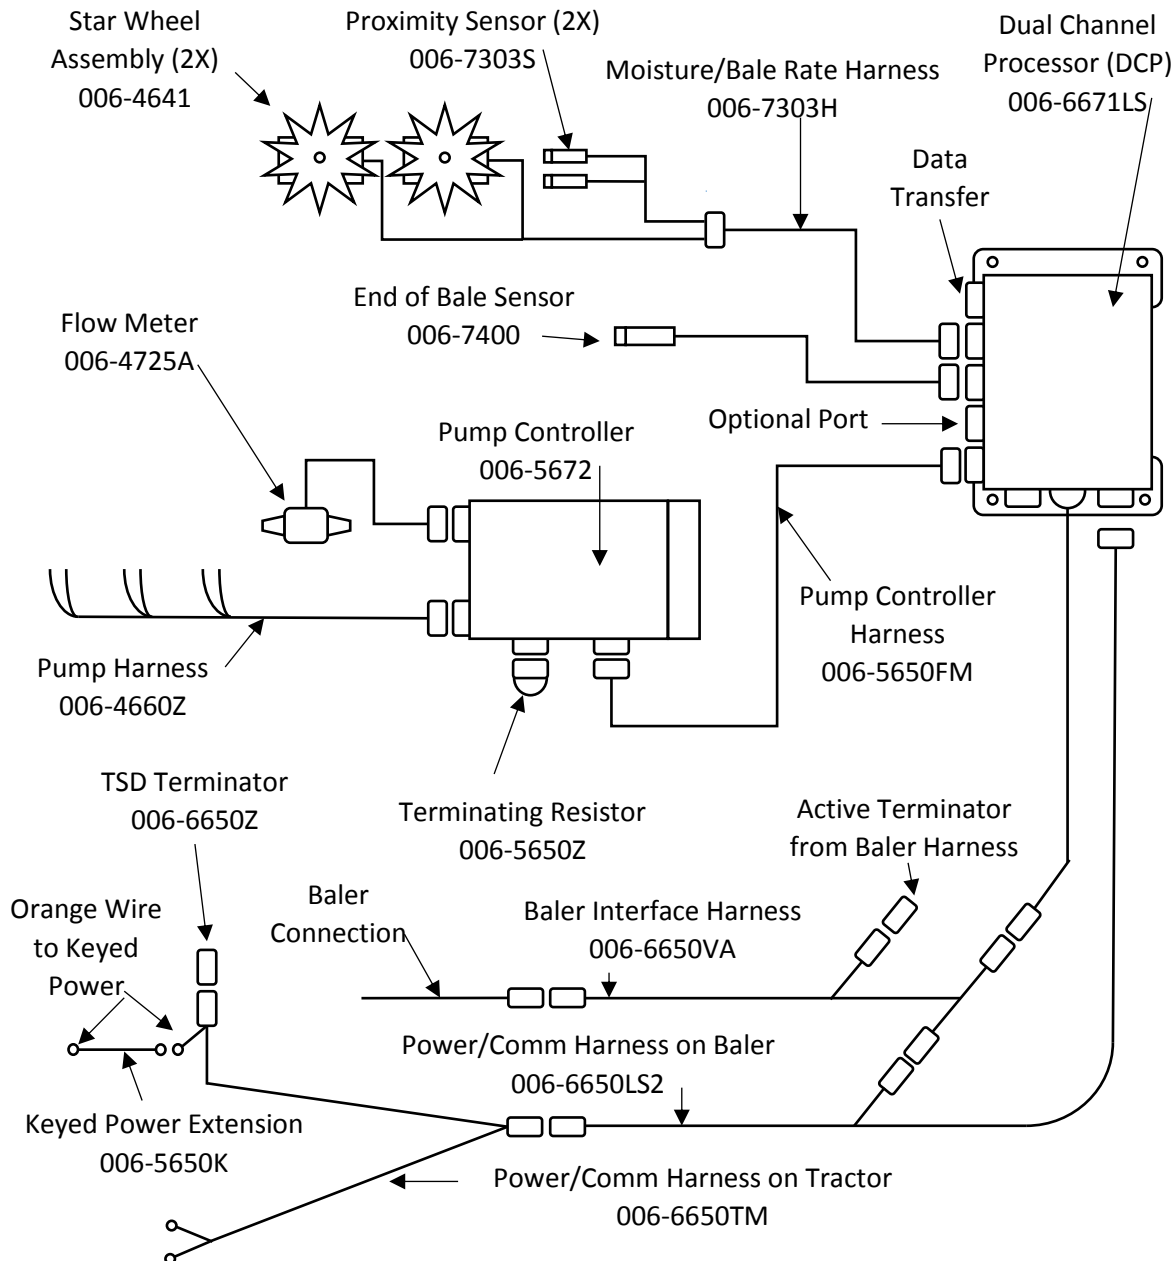

A. Route harness 006-6650LS2 along this path or similar inside of the baler. Keep harnesses away from moving parts and hydraulic hoses. Secure with existing cable clamps or use cable ties. When all connections are made to the DCP secure wires as shown above to allow for water to be shed away from the DCP.

B. Under the chamber locate the Active Terminator from the end of the baler harness. It is located at the right rear corner of the baler frame. Attach Baler Interface Harness (006-6650VA) to that location. Reconnect Active Terminator to open port of that same harness (006-6650VA). If your baler does not have a Terminator at this location please call Harvest Tec INC.

If your baler has the White Terminating Resistor you will need to attach the Pre 2012 AGCO Integration Harness (006-6650VAX) to the end of the Baler Interface harness (006-6650VA). Please contact Harvest Tec for this harness. This style terminator may be next to the Baler's Main Processor.

10. Baler Harness/Wiring Installation for AGCO with Baler Interface

- A. The **Baler Power/Communication Harness** (006-6650LS2) will attach to the open port of the Tractor **Harness** (006-6650TM) and run back to the Dual Channel Processor (DCP-006-6671LS). Connect the large plug of the Baler Power/Communication Harness (006-6650LS2) to the bottom (shorter side) of the DCP. Attach **Baler Interface Harness** (006-6650VA) in between the short whip cable hardwired to the DCP and the main Power/Communication Harness (006-6650LS2). Make sure Active Terminator removed from the back underside of the baler is attached to the Baler Interface Harness (006-6650VA).
- B. Install terminating resistor (006-5650Z) to port labeled **Modular Port** on Pump Controller (006-5672).
- C. Attach moisture and bale rate harness (006-7303H) and end of bale harness (006-7400) to the DCP.
- D. Attach the Pump Control Harness (006-5650FM) between the Pump Controller (006-5672) and the DCP (006-6671LS). Connect Keyed Power Extension harness (006-5650K) to a keyed power source.
 - a. When using Bluetooth Receiver (030-6672A) or optional Touch Screen Display (030-5670A). Connect either option to Communication Harness (006-6650TM) in place of the ISO adapter (shown below) and connect the keyed power wire to a keyed power source on tractor.
- E. Note: the Optional Port and the Data Transfer Port are not used in this application.

Pin Outs for Harnesses and Wiring Diagrams

Power/Comm Harness 006-6650TM at Hitch

10	Hose Clamp	003-9002	15	20	Fitting	003-A1414	9
				NP	Mini Plano Box	008-9001	1
				NP	EOB Bracket	001-4648K	1

*This guide is to be used as a visual aid for star wheel installation. Exact measurements on baler are determined by operator

Notes:

Notes:

Harvest Tec, LLC. Warranty and Liability Agreement

Harvest Tec, LLC. will repair or replace components that are found to be defective within 12 months from the date of manufacture. Under no circumstances does this warranty cover any components which in the opinion of Harvest Tec, LLC. have been subjected to negligent use, misuse, alteration, accident, or if repairs have been made with parts other than those manufactured and obtainable from Harvest Tec, LLC.

Our obligation under this warranty is limited to repairing or replacing free of charge to the original purchaser any part that in our judgment shows evidence of defective or improper workmanship, provided the part is returned to Harvest Tec, Inc. within 30 days of the failure. Parts must be returned through the selling dealer and distributor, transportation charges prepaid.

This warranty shall not be interpreted to render Harvest Tec, LLC. liable for injury or damages of any kind, direct, consequential, or contingent, to persons or property. Furthermore, this warranty does not extend to loss of crop, losses caused by delays or any expense prospective profits or for any other reason. Harvest Tec, LLC. shall not be liable for any recovery greater in amount than the cost or repair of defects in workmanship.

There are no warranties, either expressed or implied, of merchantability or fitness for particular purpose intended or fitness for any other reason.

This warranty cannot guarantee that existing conditions beyond the control of Harvest Tec, Inc. will not affect our ability to obtain materials or manufacture necessary replacement parts.

Harvest Tec, LLC. reserves the right to make design changes, improve design, or change specifications, at any time without any contingent obligation to purchasers of machines and parts previously sold.
