Introduction

Thank you and Congratulations on purchasing a Harvest Tec Model 438 or 439 applicator. This applicator is designed to apply a buffered propionic acid on to the forage crop as it is being baled. The applicator is designed to allow the operator to adjust the rate of preservative only when baler is stopped and the tractor shut down. The operator will need to change the rate of preservative for changes in moisture and tonnage. This manual will take you through the steps of operation of the applicator and also point out all safety precautions that need to be made while using the applicator. Read this manual carefully to learn how to operate the equipment correctly. Failure to do this can result in personal injury or equipment malfunction. If you are unsure about operating the system after consulting this manual, contact your local authorized dealership for additional assistance. If you are in need of parts for the system please see the parts breakdown in the back of this manual and contact your local authorized dealer to order the parts. This applicator is designed to apply Harvest Tec buffered propionic acid.

Right and Left sides are determined by facing in the direction of forward travel.

Model reference

| Baler make | Baler model | Base Kit | Installation kit | Tank size |
|-----------------|--------------------------------------------|----------|------------------|-----------|

Safety

Carefully read all the safety signs in this manual and on the applicator before use. Keep signs clean and in good working order. Replace missing or damaged safety signs. Replacement signs are available from your local authorized dealer. See your installation manual for under the replacement parts section for the correct part numbers.

Keep your applicator in proper working condition. Unauthorized modifications to the applicator may impair the function and/or safety of the machine.

Carefully read and understand all of the baler safety signs before installing or servicing the baler. Always use the supplied safety equipment on the baler to service the applicator.

Safety Decals

Number 1

Spraying hazard. Disconnect power before servicing the applicator

Part no. DCL-8003

Number 2

Use caution when working around chemicals. Wear all protective equipment according to the label of the product.

Part no. DCL-8001

Number 3

Read and understand the operator's manual before using or working around the equipment.

Part no. DCL-8000

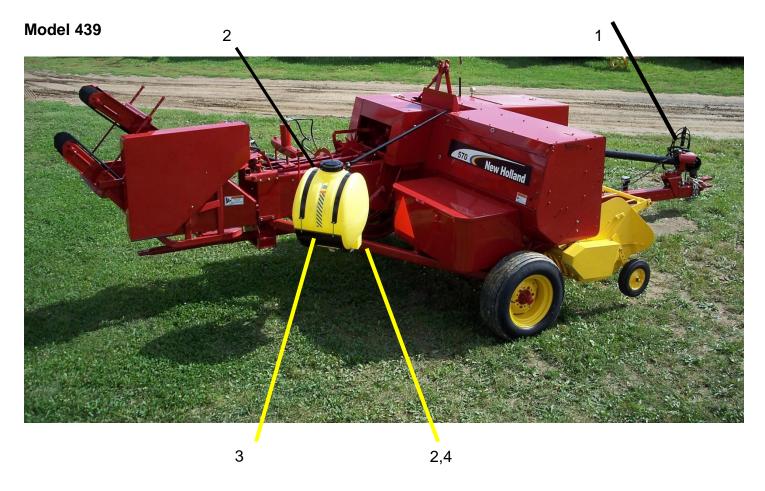

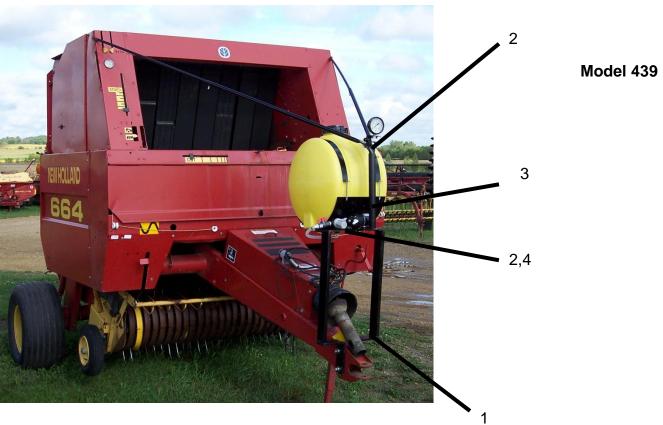

Number 4

Open (unlocked) and closed (locked) position of the ball valve.

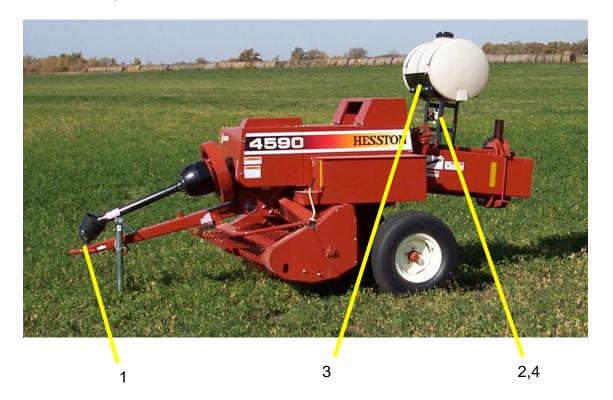

Part no. DCL-8004

Safety Decal Locations

Model 432, 438

Preparing the applicator for operation

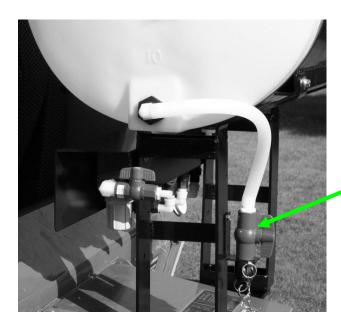

After the Applicator has been installed on the baler, follow the below steps to prepare for operating the applicator both safely and correctly.

Filling the tank:

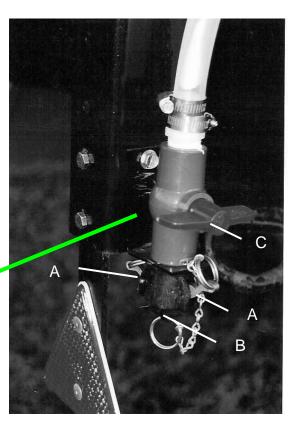

Model 432, 438

Read the label of the product being filled into the tank to determine what individual protective measures need to be taken. Locate the drain/fill line on the baler. Open the cam-couplers (A) and remove the protective plug (B). Insert the male coupler (found on transfer pump) into the female cam and close the cams (A). To open the ball valve (C) turn the handle so it is vertical. After the ball valve has been turned on switch the pump to the On position. Monitor the level on the tank visually and shut off the pump before over filling. Once the pump is turned off, close the ball valve and remove the male coupler. The handle of the ball valve (C) will be horizontal when closed. Reinstall the protective plug and close the cams. The Harvest Tec model 9212 transfer pump is recommended for this process.

Water is recommended for first time and annual start up procedures.

Drain/Fill line on the baler

Enlarged view of the drain/fill line valve and cam-coupler assembly.

Filling the tank:

Model 439

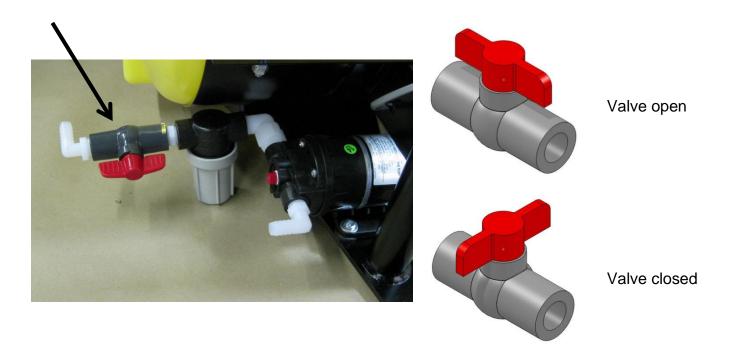

Read the label of the product being filled into the tank to determine what individual protective measures need to be taken. Clean the tank lid area and unscrew the lid. Transfer product from the container into the tank.

Water is recommended for first time and annual start up procedures.

Operation of the main ball valve

The ball valve should be closed at all times when the applicator is not being used. The valve should also be closed when any service work is being done to the baler or applicator.

The valve is located next to the pump and by the applicator tank. The arrow below points at the valve.

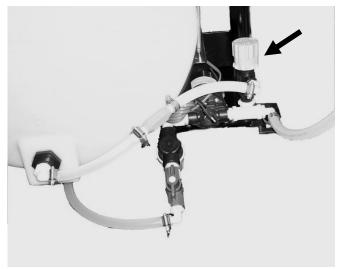

Connecting the power harness

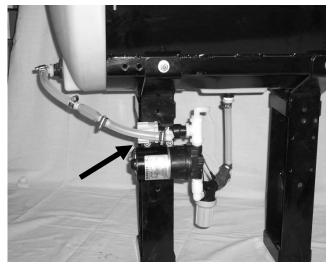

The power harness that supplies power from the tractor battery to the applicator pump has a disconnect at the hitch. Connect the two together for operation. Always disconnect before servicing the applicator or baler.

Operation of the pressure regulator

The pressure regulator is located next to the pump. To adjust the regulator the tractor and baler need to be turned off. Loosen the jam nut under the adjustment knob. Turn the knob clockwise to increase pressure and counter clockwise to decrease pressure. Lock the jam nut after the adjustment has been made.

Regulator on model 439

Regulator on model 432. 438

First time and annual start up

After familiarizing yourself with the pressure regulator, fill the tank with 5 gallons of water. Turn on the power to the pump by pushing the toggle switch up. You might hear the buzzing of the motor. Once the water starts to spray check the system for leaks. When you are comfortable with the operation of the applicator you can set to apply the amount of chemical needed for the current field conditions.

Field Operation

Calibration

There are three things that you need to know when calibrating your applicator. First you need know how many tons per hour you bale. Second you need to know the rate, or how many pounds of product to apply for a given tons per hour. Finally you need to know what tips to use and at what pressure to set the gauge.

Determining tons per hour for small square balers

- 1. Bale for three minutes.
- 2. Count the number of bales made in those three minutes.
- 3. Weigh several bales to determine the average weight.
- 4. Use the bale rate chart on the following page to determine the tons you are baling per hour.

Example: You baled 11 bales in three minutes. After weighing some of the bales you found the average bale weight to be 55 lbs. Using the following chart cross reference 11 bales and 55lbs and you will find the rate to be 6.0 tons per hour.

CONVENTIONAL BALE RATE CHART (TONS PER HOUR)

| BALES MADE | | | | WEIGHT | PER BALE | | | | |
|--------------|-----|-----|------|--------|----------|------|------|------|------|
| IN 3 MINUTES | 40# | 45# | 50# | 55# | 60# | 65# | 70# | 75# | 80# |
| 9 | 3.6 | 4.0 | 4.5 | 5.0 | 5.4 | 5.8 | 6.3 | 6.7 | 7.2 |
| 10 | 4.0 | 4.0 | 5.0 | 5.5 | 6.0 | 6.5 | 7.0 | 7.5 | 8.0 |
| 11 | 4.4 | 5.0 | 5.5 | 6.0 | 6.6 | 7.1 | 7.7 | 8.2 | 8.8 |
| 12 | 4.8 | 5.4 | 6.0 | 6.6 | 7.2 | 7.8 | 8.4 | 9.0 | 9.6 |
| 13 | 5.2 | 5.8 | 6.5 | 7.1 | 7.8 | 8.4 | 9.1 | 9.7 | 10.4 |
| 14 | 5.6 | 6.3 | 7.0 | 7.7 | 8.4 | 9.1 | 9.8 | 10.5 | 11.2 |
| 15 | 6.0 | 6.7 | 7.5 | 8.2 | 9.0 | 9.7 | 10.7 | 11.2 | 12.0 |
| 16 | 6.4 | 7.2 | 8.0 | 8.8 | 9.6 | 10.4 | 11.2 | 12.0 | 12.8 |
| 17 | 6.8 | 7.6 | 8.5 | 9.3 | 10.2 | 11.0 | 11.9 | 12.7 | 13.6 |
| 18 | 7.2 | 8.1 | 9.0 | 9.9 | 10.8 | 11.7 | 12.6 | 13.5 | 14.4 |
| 19 | 7.6 | 8.5 | 9.5 | 10.4 | 11.4 | 12.3 | 13.3 | 14.2 | 15.2 |
| 20 | 8.0 | 9.0 | 10.0 | 11.0 | 12.0 | 13.0 | 14.0 | 15.0 | 16.0 |

Determining tons per hour for round balers

- 1. Time 3 bales and average the time it takes to make a bale.
- 2. Estimate the weight of the bale.
- 3. Use the bale rate chart below to determine the tons you are baling per hour.

Example: You made 3 round bales and it took you an average of 2 minutes a piece to bale each of them. Your baler's operator manual tells you that an average bale made by your machine weighs 1000lb. (Remember if the hay is dry it will weigh less and if the hay is wet it will weigh more.) Using the chart below, cross-reference 2 minutes with 1000lb. and you will come up with 15 ton per hour.

| Average time to | | | Roun | d Baler (| Tons pe | r Hour) | | | |
|-----------------|------------------|------|------|-----------|---------|---------|-------|-------|-------|
| make a bale | WAIGHT HAF KAIAF | | | | | | | | |
| (min.) | 600 | 800 | 1000 | 1200 | 1400 | 1600 | 1800 | 2000 | 2200 |
| 0.5 | 36.0 | 48.0 | 60.0 | 72.0 | 84.0 | 96.0 | 108.0 | 120.0 | 132.0 |
| 1 | 18.0 | 24.0 | 30.0 | 36.0 | 42.0 | 48.0 | 54.0 | 60.0 | 66.0 |
| 1.5 | 12.0 | 16.0 | 20.0 | 24.0 | 28.0 | 32.0 | 36.0 | 40.0 | 44.0 |
| 2 | 9.0 | 12.0 | 15.0 | 18.0 | 21.0 | 24.0 | 27.0 | 30.0 | 33.0 |
| 2.5 | 7.2 | 9.6 | 12.0 | 14.4 | 16.8 | 19.2 | 21.6 | 24.0 | 26.4 |
| 3 | 6.0 | 8.0 | 10.0 | 12.0 | 14.0 | 16.0 | 18.0 | 20.0 | 22.0 |
| 3.5 | 5.1 | 6.9 | 8.6 | 10.3 | 12.0 | 13.7 | 15.4 | 17.1 | 18.9 |
| 4 | 4.5 | 6.0 | 7.5 | 9.0 | 10.5 | 12.0 | 13.5 | 15.0 | 16.5 |
| 4.5 | 4.0 | 5.3 | 6.7 | 8.0 | 9.3 | 10.7 | 12.0 | 13.3 | 14.7 |
| 5 | 3.6 | 4.8 | 6.0 | 7.2 | 8.4 | 9.6 | 10.8 | 12.0 | 13.2 |
| 5.5 | 3.3 | 4.4 | 5.5 | 6.5 | 7.6 | 8.7 | 9.8 | 10.9 | 12.0 |
| 6 | 3.0 | 4.0 | 5.0 | 6.0 | 7.0 | 8.0 | 9.0 | 10.0 | 11.0 |
| 6.5 | 2.8 | 3.7 | 4.6 | 5.5 | 6.5 | 7.4 | 8.3 | 9.2 | 10.2 |
| 7 | 2.6 | 3.4 | 4.3 | 5.1 | 6.0 | 6.9 | 7.7 | 8.6 | 9.4 |
| 7.5 | 2.4 | 3.2 | 4.0 | 4.8 | 5.6 | 6.4 | 7.2 | 8.0 | 8.8 |
| 8 | 2.3 | 3.0 | 3.8 | 4.5 | 5.3 | 6.0 | 6.8 | 7.5 | 8.3 |
| 8.5 | 2.1 | 2.8 | 3.5 | 4.2 | 4.9 | 5.6 | 6.4 | 7.1 | 7.8 |
| 9 | 2.0 | 2.7 | 3.3 | 4.0 | 4.7 | 5.3 | 6.0 | 6.7 | 7.3 |
| 9.5 | 1.9 | 2.5 | 3.2 | 3.8 | 4.4 | 5.1 | 5.7 | 6.3 | 6.9 |
| 10 | 1.8 | 2.4 | 3.0 | 3.6 | 4.2 | 4.8 | 5.4 | 6.0 | 6.6 |

Determining the rate of chemical

The number of pounds of chemical required to be applied to a given ton of hay, depends on the moisture and the type of chemical used. The moisture of the hay is important in determining how much chemical to use. The wetter the hay the more product is needed, the dryer the hay the less product is needed. By knowing the moisture, you can make sure you are treating the hay correctly. Under applying will save money but spoilage most likely occurs. Over applying will waste money however, the hay will be saved. Some chemicals require more or less to treat the same amount of hay. To find the exact number of pounds required, for a given hay moisture, refer to the label on the drum or contact the manufacture. Harvest Tec applicators come with low, medium, and high sets of tips. If your chemical requires rates other than what these tips deliver you will need to purchase them through your dealer.

Selecting tips and setting pressure for round balers

Once you have determined your tons per hour and the amount of chemical needed for the moisture you are applying at, you can select your tips and determine your gauge settings.

- 1. Multiply the tons per hour by the amount of chemical required for the moisture you are applying at. This sum will give you the application rate.
- 2. Select the proper set of tips from the application rate chart and install them. (Pg.17)
- 3. For the tips you have selected, you will need to keep the gauge at the recommended PSI to achieve the proper application rate.
- 4. Set the pressure by adjusting the dial on the control box and by reading the pressure of the gauge to match the desired rates. The numbers on the dial are for reference only. Rate is determined by watching the pressure gauge.

Example: You are baling at 22 tons per hour with your round baler. The moisture that you are baling at requires you to apply 8 pounds per ton. Multiply the 22 tons x 8lbs. = 176lbs. per hour. Using the chart, lbs/hr with three nozzles, on page 17, you will notice the green set of tips at 35 PSI will give you that output.

Calibration reminders

*Watch the pressure gauge, as the setting will vary with tractor's electrical output, temperature and other factors.

*Check your application rate by measuring product used against actual tons baled.

REMEMBER, ONLY YOU CAN CONTROL HOW MUCH PRODUCT IS APPLIED AND THAT WILL DETERMINE IF YOUR HAY WILL KEEP!!!

Selecting tips and setting pressure for small square balers

Once you have determined your tons per hour and the amount of chemical needed for the moisture you are applying at, you can select your tips and determine your gauge settings.

- 1. Multiply the tons per hour by the amount of chemical required for the moisture you are applying at. This sum will give you the application rate.
- 2. Select the proper set of tips from the application rate chart and install them. (Pg.15-16)
- 3. For the tips you have selected, you will need to keep the gauge at the recommended PSI to achieve the proper application rate.
- 4. Set the pressure by adjusting the dial on the control box and by reading the pressure of the gauge to match the desired rates. The numbers on the dial are for reference only. Rate is determined by watching the pressure gauge.

Example: You are baling at 12.5 tons per hour with your conventional square baler. The moisture that you are baling at requires you to apply 8 pounds per ton. Multiply the 12.5 tons x 8lbs. = 100lbs. per hour. Using the chart, lbs/hr with two nozzles, on page 16, you will notice the medium or pink set of tips at 35 PSI will give you that output.

Calibration reminders

*Watch the pressure gauge, as the setting will vary with tractor's electrical output, temperature and other factors.

*Check your application rate by measuring product used against actual tons baled.

REMEMBER, ONLY YOU CAN CONTROL HOW MUCH PRODUCT IS APPLIED AND THAT WILL DETERMINE IF YOUR HAY WILL KEEP!!!

<u>Maintenance</u>

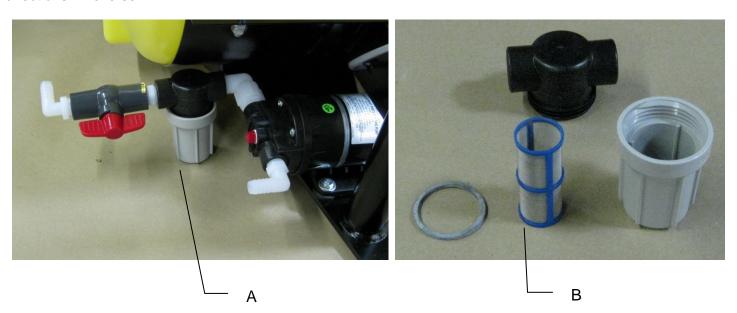

• If you are unsure how to perform any of the maintenance steps have your local authorized dealer perform the tasks.

Maintenance Schedule

| | Daily | 10 hrs | 400 hrs | Weekly | Monthly | Season |
|-------------------------------|-------|--------|---------|--------|---------|--------|
| Filter bowl cleaning | | Χ | | | | X |
| Tips & tip screen cleaning | | Χ | | | | Х |
| Tank lid cleaning | | Χ | | | | Х |
| Dielectric grease connections | | | | | Χ | Х |
| Rebuild pump | | | X | | | |
| Battery connections | | | | Χ | | X |
| Visually inspect hoses | | | | X | | Х |

Filter bowl cleaning: Before cleaning the filter bowl all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

Verify that the ball valve located next to the pump is turned off. Locate the filter bowl on the side of the pump manifold (A). Unscrew the bottom section of the filter bowl and remove the strainer. (B) Clean off any debris and soak in warm water with a mild soap if necessary. Once the screen is clean reinstall by following the directions in reverse.

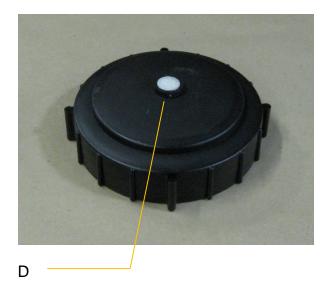

Tips & tip screen cleaning: Before cleaning the tips and screens all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

Verify that the ball valve located next to the pump is turned off. Disconnect spray shield from hangers if possible or remove tips in place. Remove the tip, and screen. Some models may require a wrench to remove. Clean off any debris and soak tip and screen in warm water with a mild soap if necessary. Once the tips and screens are cleaned reinstall by following the directions in reverse.

Tank lid cleaning: Before cleaning the tank lid all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves).

The tank lid is located on the top of the tank. Use the supplied handle on the tank to secure your person and use the other hand to remove any debris from the top of the tank. Unscrew the tank lid and bring down ground level. Use compressed air clean out the tank screen (D). If the screen cannot be thoroughly cleaned with compressed air, replace fitting (005-9022B3). Once the screen is cleaned reinstall the cover.

Dielectric grease connections: Disconnect all harnesses on the applicator, clean the connections, and repack with dielectric grease.

Rebuild pump: If the pump is not working up to specifications a pump rebuild kit may fix the problems.

Verify that the ball valve is turned off. Before working around the pump all personal protective equipment must be worn (Face shield or goggles, chemically resistant apron, boots, and gloves). Disconnect all pump fittings and remove pump from saddle. Follow rebuild instructions supplied with pump rebuild kit. Reinstall after rebuild is complete.

Battery connections: Follow the batteries safety warnings and clean the battery connections. If the connections cannot be cleaned, replace harness.

Miscellaneous maintenance:

- 1. Depending on the product being used, the system may need to be flushed with water at a regular interval (consult with manufacturer of the chemical.) If Harvest Tec product is being used, flushing is not necessary.
- 2. Although the pump can run dry, extended operation of a dry pump will increase wear. Watch the preservative level in the tank.
- 3. If you are using bacterial inoculants, flush your system daily after every use.

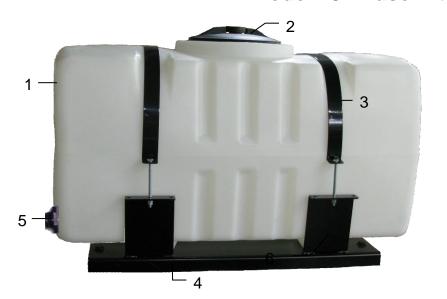

Winter Storage

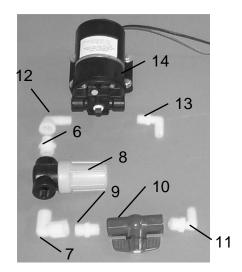

- 1. Thoroughly flush the system with water.
- 2. Remove the filter bowl and run dry until the water has cleared out of the intake side.
- 3. Remove the red plug from the bottom of the pump, drain, and run the pump for 30 seconds or until it is drv.
- 4. Drain all lines on the outlet side.
- 5. Never use oils or alcohol based anti-freeze in the system.
- 6. For spring start-up, if the pump is frozen, turn off the power immediately to avoid burning the motor out or blowing a fuse. The pump head can be disassembled and freed or rebuilt in most cases. Check the fuses after the pump has been freed.
- 7. Disconnect power from the Precision Information Processor.
- 8. Remove display from tractor and store in a warm, dry place.

Troubleshooting

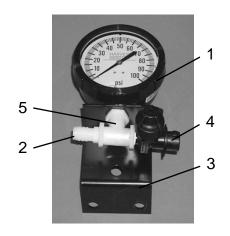

| PROBLEM | POSSIBLE CAUSE | SOLUTION |
|-------------------------------|-----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Pump will not run. | 1. Pump locked up. | Clean or rebuild pump if motor is OK. |
| | 2. Damaged wire. | Repair damaged wire. |
| | 3. Vapor locked. | 3. Loosen hose by check valve by nozzles or manifold and bleed air. |
| Pump runs but will not prime. | Air leak in intake. | Tighten fittings on intake side. |
| | Clogged intake. | 2. Clean. |
| | 3. Restricted outlet. | 3. Check and clean tips. |
| | 4. Check valve on outlet stuck closed. | 4. Clean or repair check valve. |
| | 5. Dirt inside pump. | 5. Replace pump check valve. |
| Pump does not develop enough | 1. Air leaks or clogs on inlet | Tighten or clean filter bowl |
| output. | side. | assembly. |
| | 2. Electronic box out of adjustment. | 2. Refer to box adjustment page. |
| | 3. Pump worn or dirty. | 3. Rebuild pump. |
| | Low supply voltage. (Pump requires 12v minimum) | 4. Check voltage at connection with voltmeter. |
| | 5. Bad gauge. | 5. Gauge should read less than 10 PSI when not in use. Also tips should lose spray pattern below 10 PSI. Check accuracy. |
| Pump output varies. | Clogged or restricted inlet. | 1. Clean |
| | 2. Worn pump parts. | 2. Rebuild pump. |

Notes

Notes

Harvest Tec, Warranty and Liability Agreement.

Harvest Tec, LLC. will repair or replace components that are found to be defective within 12 months from the date of manufacture. Under no circumstances does this warranty cover any components which in the opinion of Harvest Tec, LLC. have been subjected to negligent use, misuse, alteration, accident, or if repairs have been made with parts other than those manufactured and obtainable from Harvest Tec, LLC.

Our obligation under this warranty is limited to repairing or replacing free of charge to the original purchaser any part that in our judgment shows evidence of defective or improper workmanship, provided the part is returned to Harvest Tec, LLC. within 30 days of the failure. Parts must be returned through the selling dealer and distributor, transportation charges prepaid.

This warranty shall not be interpreted to render Harvest Tec, LLC. liable for injury or damages of any kind, direct, consequential, or contingent, to persons or property. Furthermore, this warranty does not extend to loss of crop, losses caused by delays or any expense prospective profits or for any other reason. Harvest Tec, LLC. shall not be liable for any recovery greater in amount than the cost or repair of defects in workmanship.

There are no warranties, either expressed or implied, of merchantability or fitness for particular purpose intended or fitness for any other reason.

This warranty cannot guarantee that existing conditions beyond the control of Harvest Tec, LLC. will not affect our ability to obtain materials or manufacture necessary replacement parts.

Harvest Tec, LLC. reserves the right to make design changes, improve design, or change specifications, at any time without any contingent obligation to purchasers of machines and parts previously sold.
