

Forage Harvester H20

Standalone Moisture Sensor for all Makes and Models of Forage Harvesters

Easily adds advanced moisture-sensing capability to any forage harvester, new or old, with a simple, operator-friendly design that boosts machine efficiency and longevity

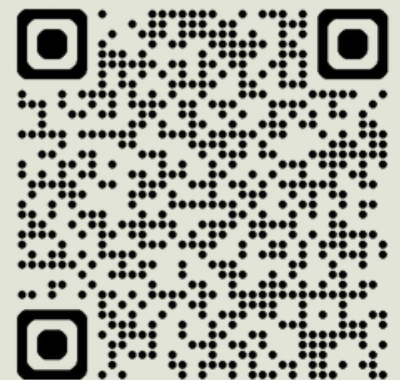

Get continuous moisture readings between 40%–75% with ± 3 -point accuracy and dual crop scales for corn and hay—right from your tablet or smartphone using the free H20 app

Add cutting-edge moisture sensing to older harvesters or expand capabilities across your fleet quickly and affordably

Key Features

- Precise readings (± 3 points) across corn and hay without the high cost of NIR
- Installs on any SPFH or pull-type harvester with a simple, operator-friendly setup. Monitor data in real time via the free H20 app on your smart phone or tablet.
- Make smarter harvest decisions with continuous moisture readouts. Instead of waiting for oven dry down or lab results
- Offset adjustable to match lab results

Affordable, Accurate, Real- Time Crop Moisture Sensing

Why Choose Harvest Tec?

Feature	201FH	NIR Systems
Cost	1x	5x
Accuracy	±3%	±3%
Compatibility	All Forage Harvesters	Brand-specific
Ease of Use	Very Easy	Complex

Additional Features

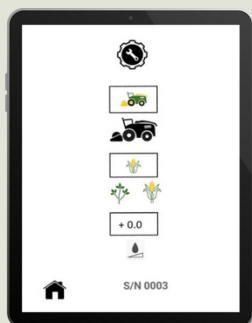

-  Universal fit in spout of self-propelled or pull type forage harvesters
-  Continuous readout of moisture of the crop being harvested
-  Moisture readings from 40% - 75%
-  Scale offset +/- 8 points

Built For Any Harvester, Any Operator

- ▶ Custom harvesters
- ▶ Dairy & livestock producers
- ▶ Row crop farmers
- ▶ Fleet managers

Moisture Monitoring In Your Hand

-  Secure hard-wired connection
-  Live moisture % during harvest
-  Select crop moisture scale: Corn or Hay
-  View readings in real-time on any phone/tablet

Part Numbers

- ▶ 201FH - Forage Harvester H2O Kit
- ▶ 1670DK - Optional field-ready Android tablet with case, mount, app
- ▶ 4670DK - Optional field-ready iPad Mini with case, mount and app
