

H2O Precision Moisture Sensor

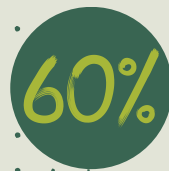

Displays Instantaneous moisture every 3 seconds

Add-on kit is available to provide average last bale moisture percentage

Rugged disc plates and star wheels are designed for long-term use with minimal wear

Only on-baler moisture sensor that reads up to 60% with reliable accuracy

Moisture Monitor

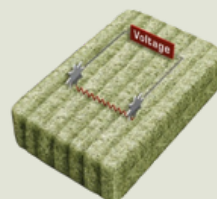

The moisture sensor connects to your Apple or Android device via the charging/data cable, using the free H2O app.

Precise Controls

The hardwired module provides a secure wired connection, built-in device charging, and real-time moisture readings for enhanced accuracy.

Moisture Insight

The H2O sensor uses dual star wheels or discs to take a moisture reading every 3 seconds giving real-time crop condition visibility.

Dye Marker

The optional Dye Marker Accessory can be added to the H2O Moisture Sensor that will mark up to 60 bales that is above a set moisture with a red, food-grade stripe. The bale is marked as it is completed, allowing the operator to easily identify those bales. Operators can also manually mark bales with the push of a button.
